

Reflections on the baryon asymmetry

Reflections, not thoughts or ideas

(Certainly not a summary!)

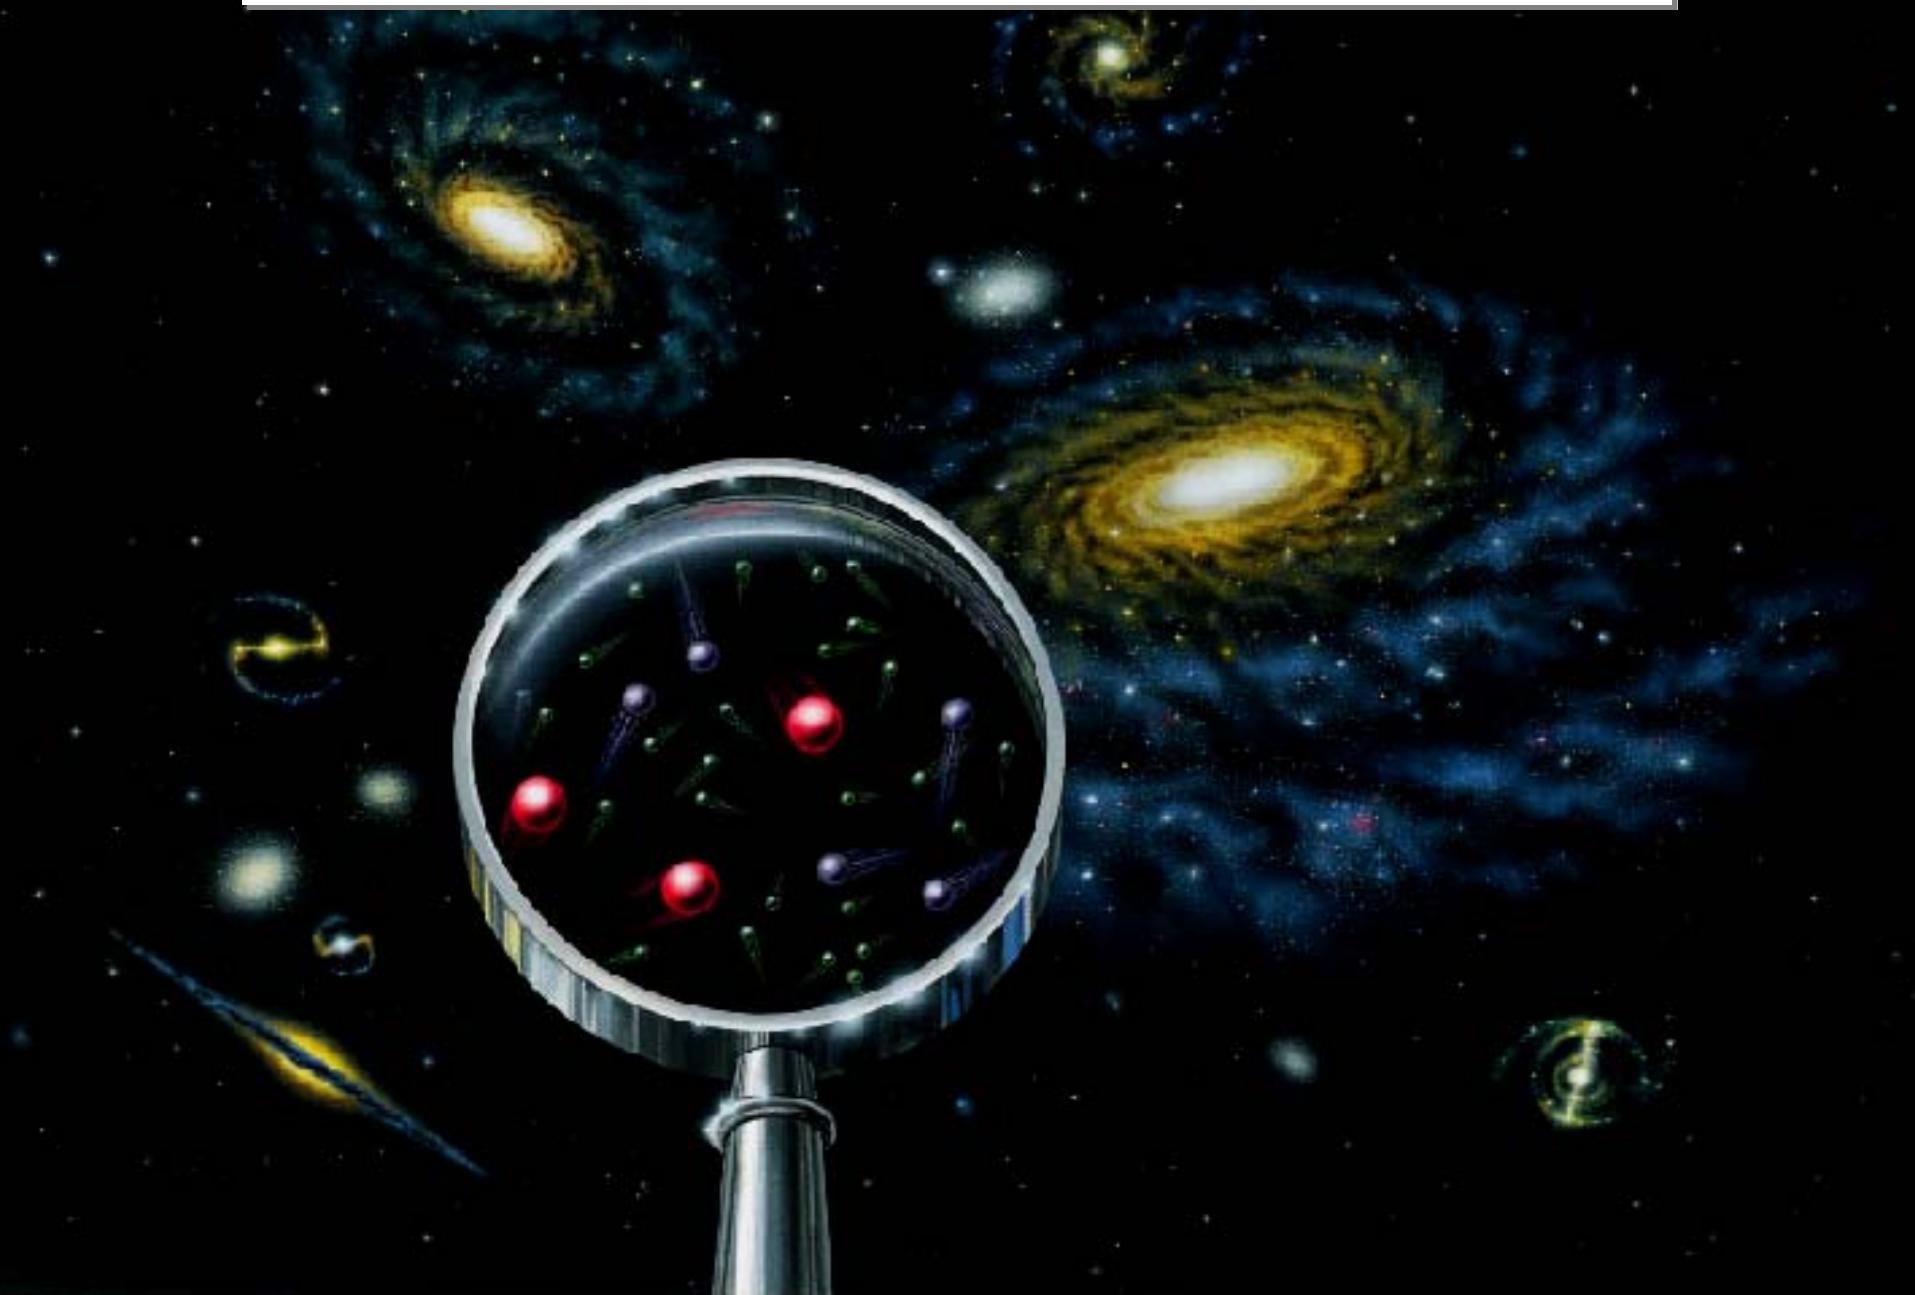

VIIth Rencontres de Blois June 2002

Matter—Antimatter Asymmetry

Rocky Kolb

Fermilab, University of Chicago, & CERN

Inner space / Outer space

Baryon asymmetry symbols?

Salamander (Francois I)

Ermine (Claude of France)

Porcupine (Loius XII)

Flying Squirrel (Rocky of US)

The baryon asymmetry is like a salamander

- Born in the fire of the big bang
- Denotes constancy

* I ~~wilt~~ and extinguish

Cosmological parameters

- **Cosmological parameters:**

H_0 → Hubble's constant

q_0 → deceleration parameter

Ω_i → the cosmic food chain

$(\Omega_{\text{TOTAL}}, \boxed{\Omega_M}, \Omega_B, \Omega_\Lambda, \Omega_\gamma, \Omega_\nu, \dots)$

t_0 → age of the universe

T_0 → temperature of the universe

- **Power spectrum of large-scale structure:**

$P(k)$

- **Anisotropy of CMB:**

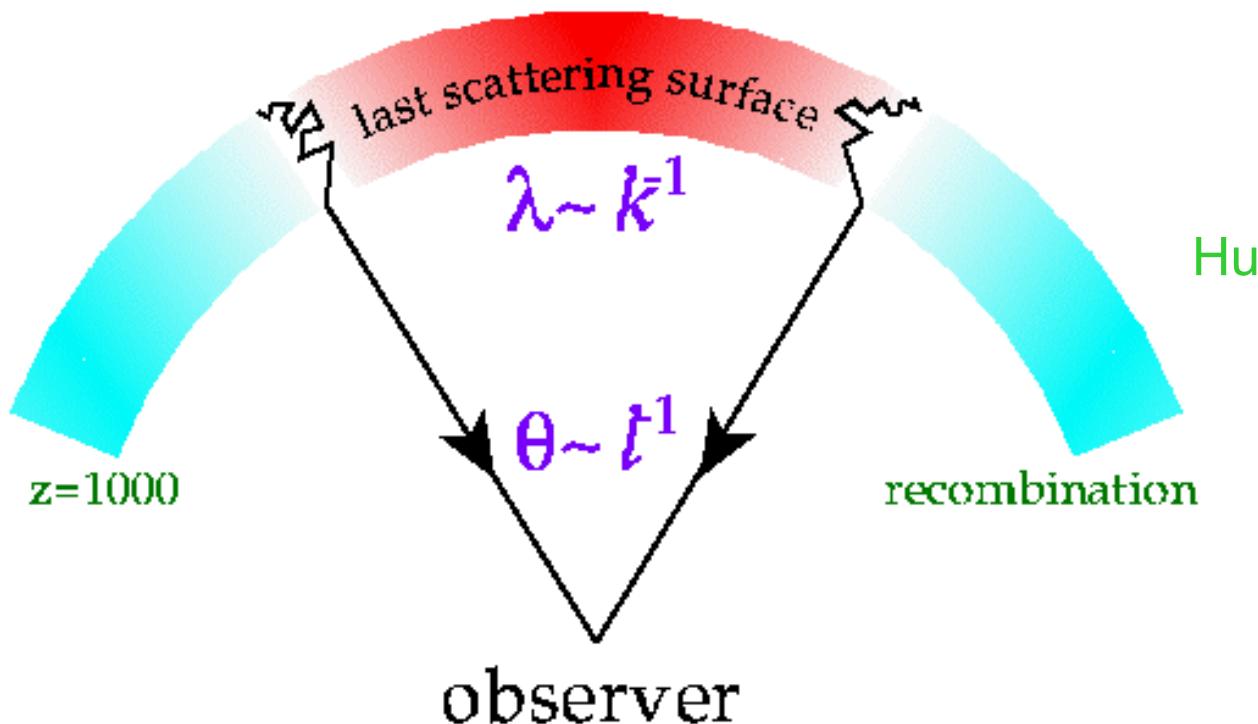

C_l

Cosmological parameters

... are just numbers

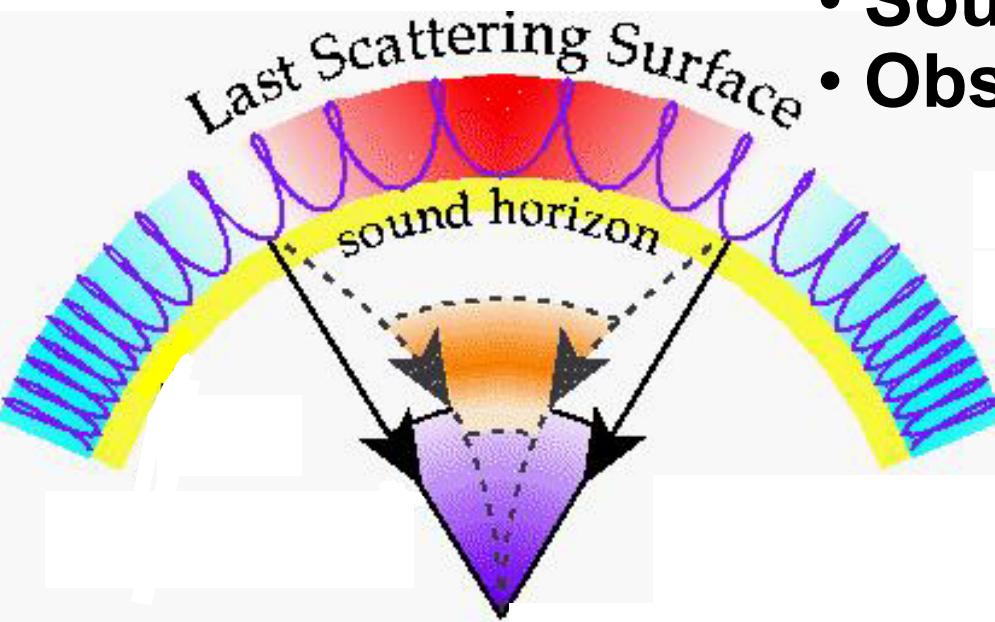

Acoustic peaks $\Omega_{TOTAL} = 1$

- At recombination, baryon–photon fluid undergoes “acoustic oscillations” $A \cos kt + B \sin kt$
- Compressions and rarefactions change T_γ
- Peaks in ΔT_γ correspond to extrema of compressions and rarefactions

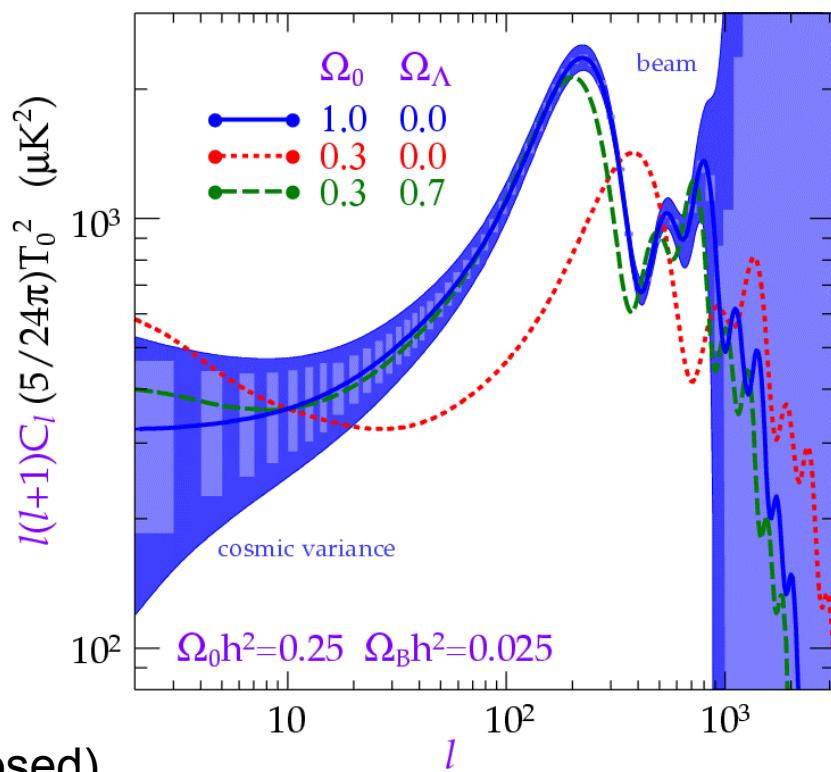

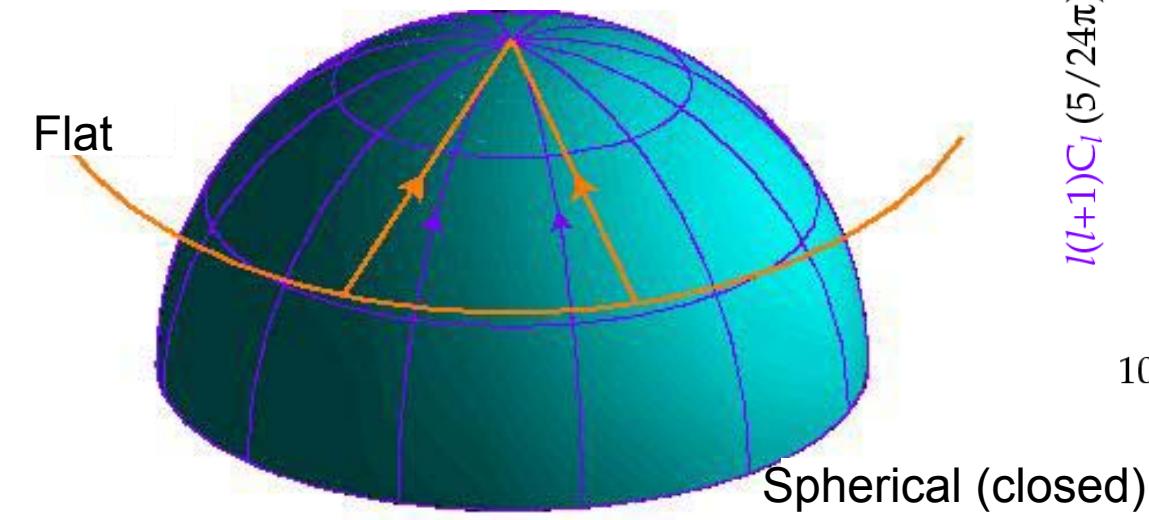

Acoustic peaks $\Omega_{\text{TOTAL}}=1$

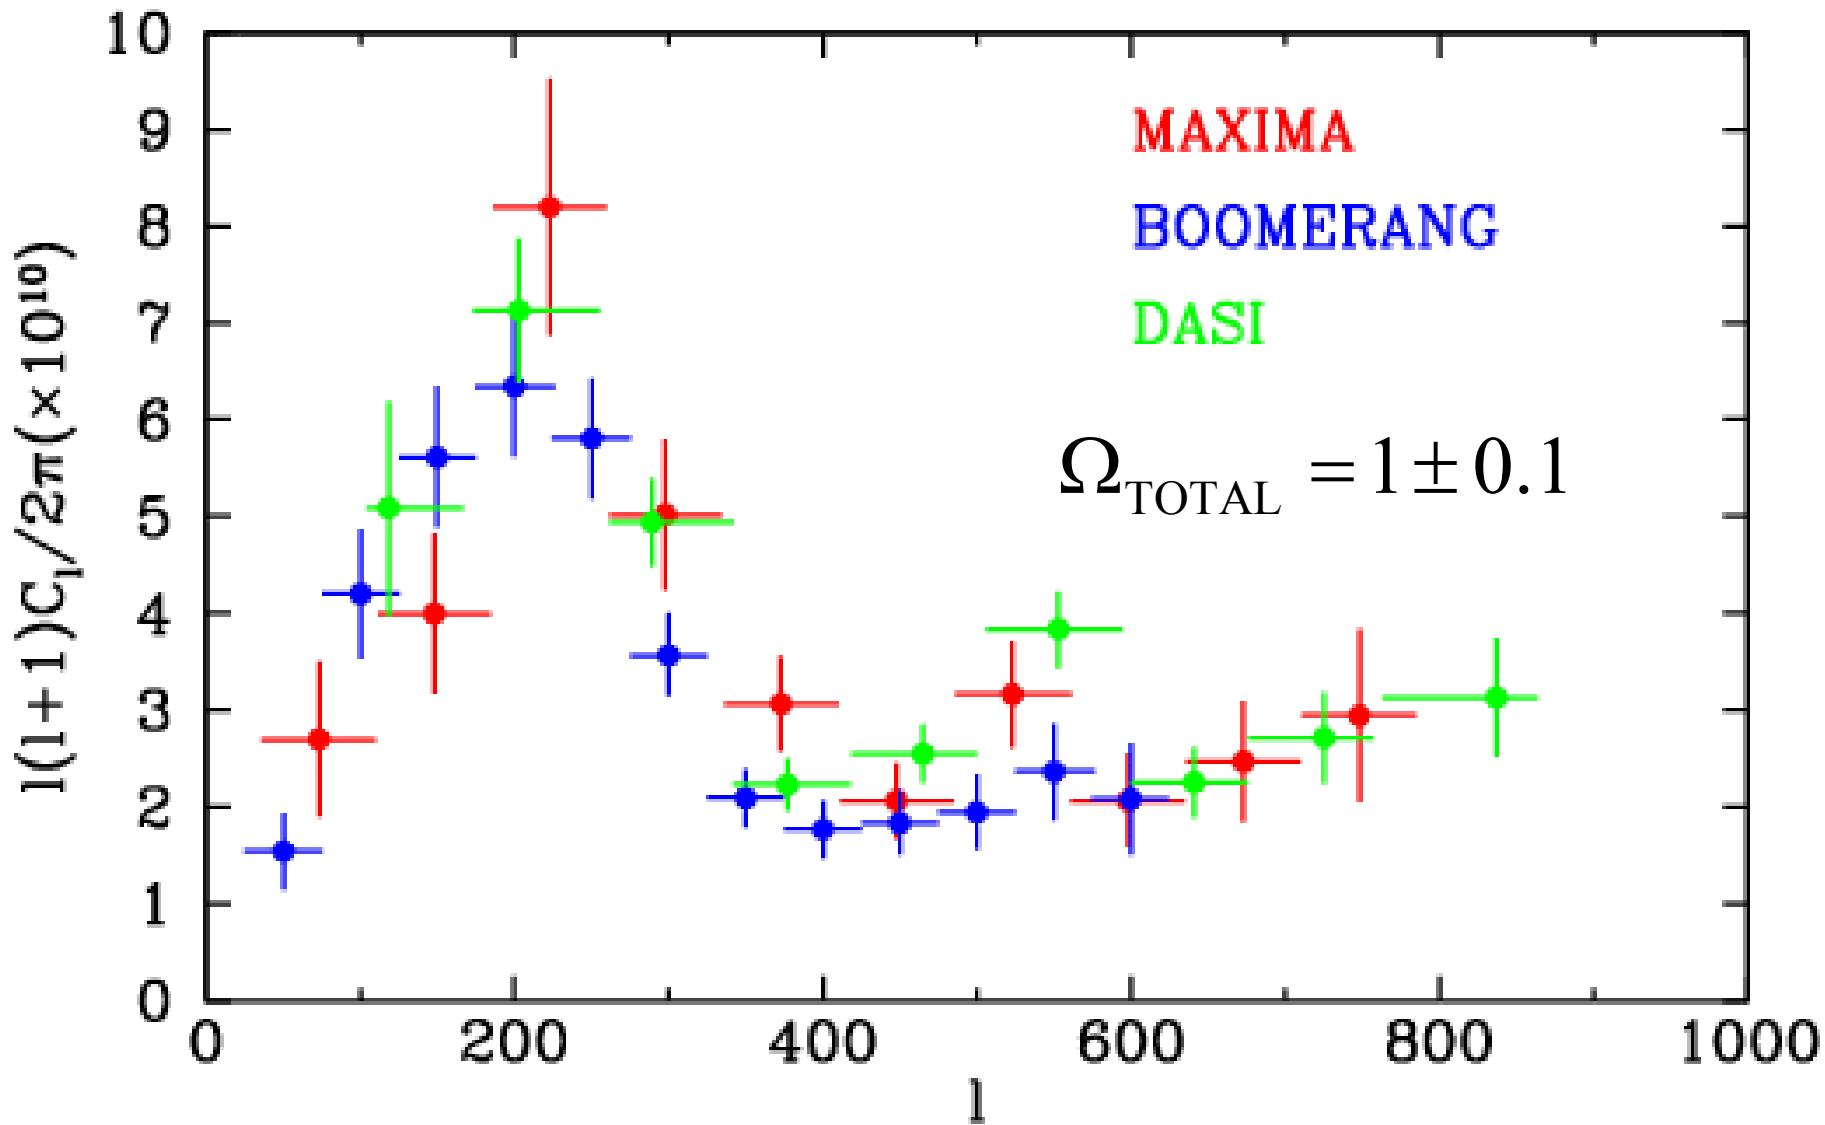

- Sound travel distance known
- Observed l_{peak} \rightarrow geometry

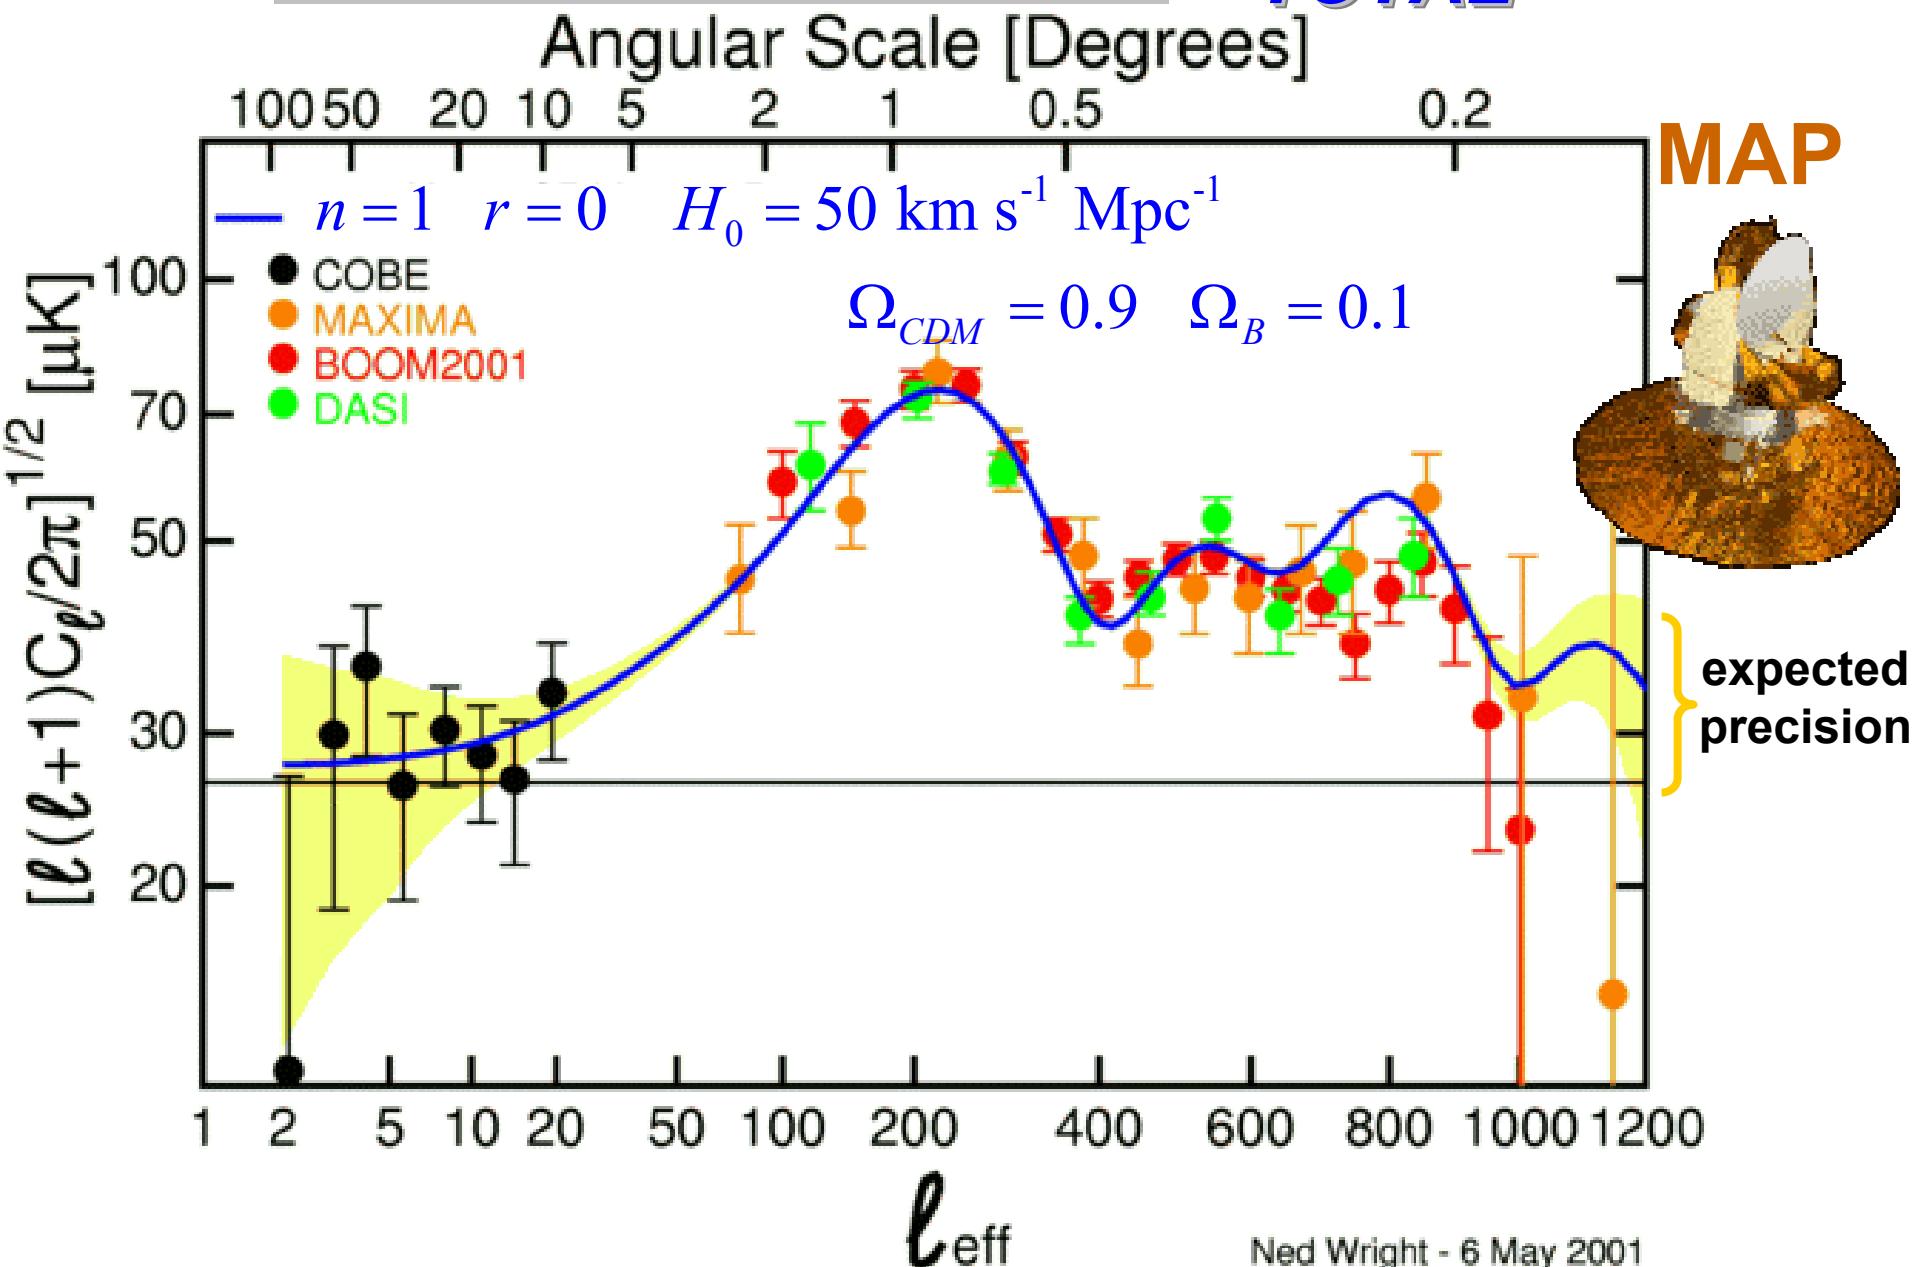

Flat (Euclidean) —————
Hyperbolic (open)
.....

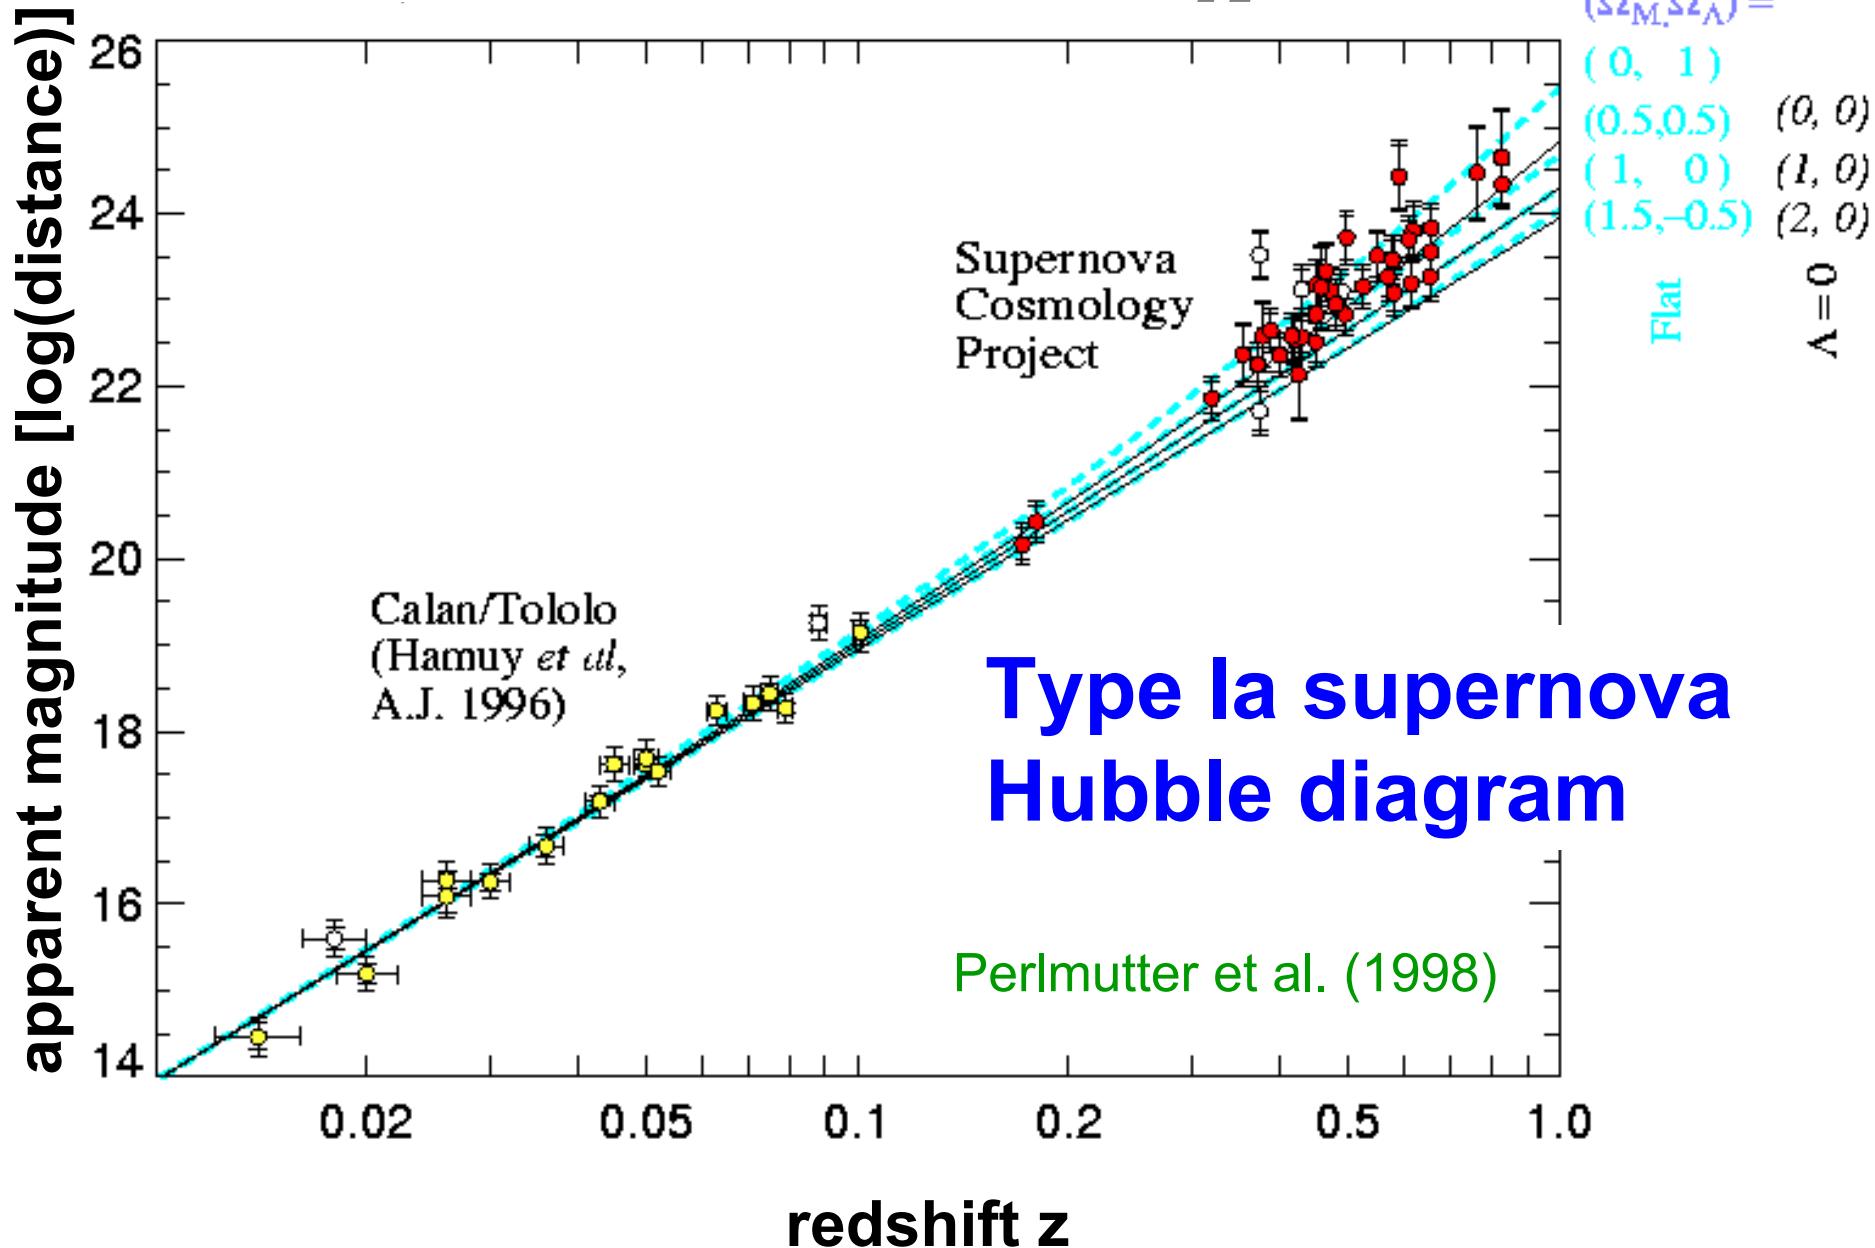

Acoustic peaks $\Omega_{TOTAL} = 1$

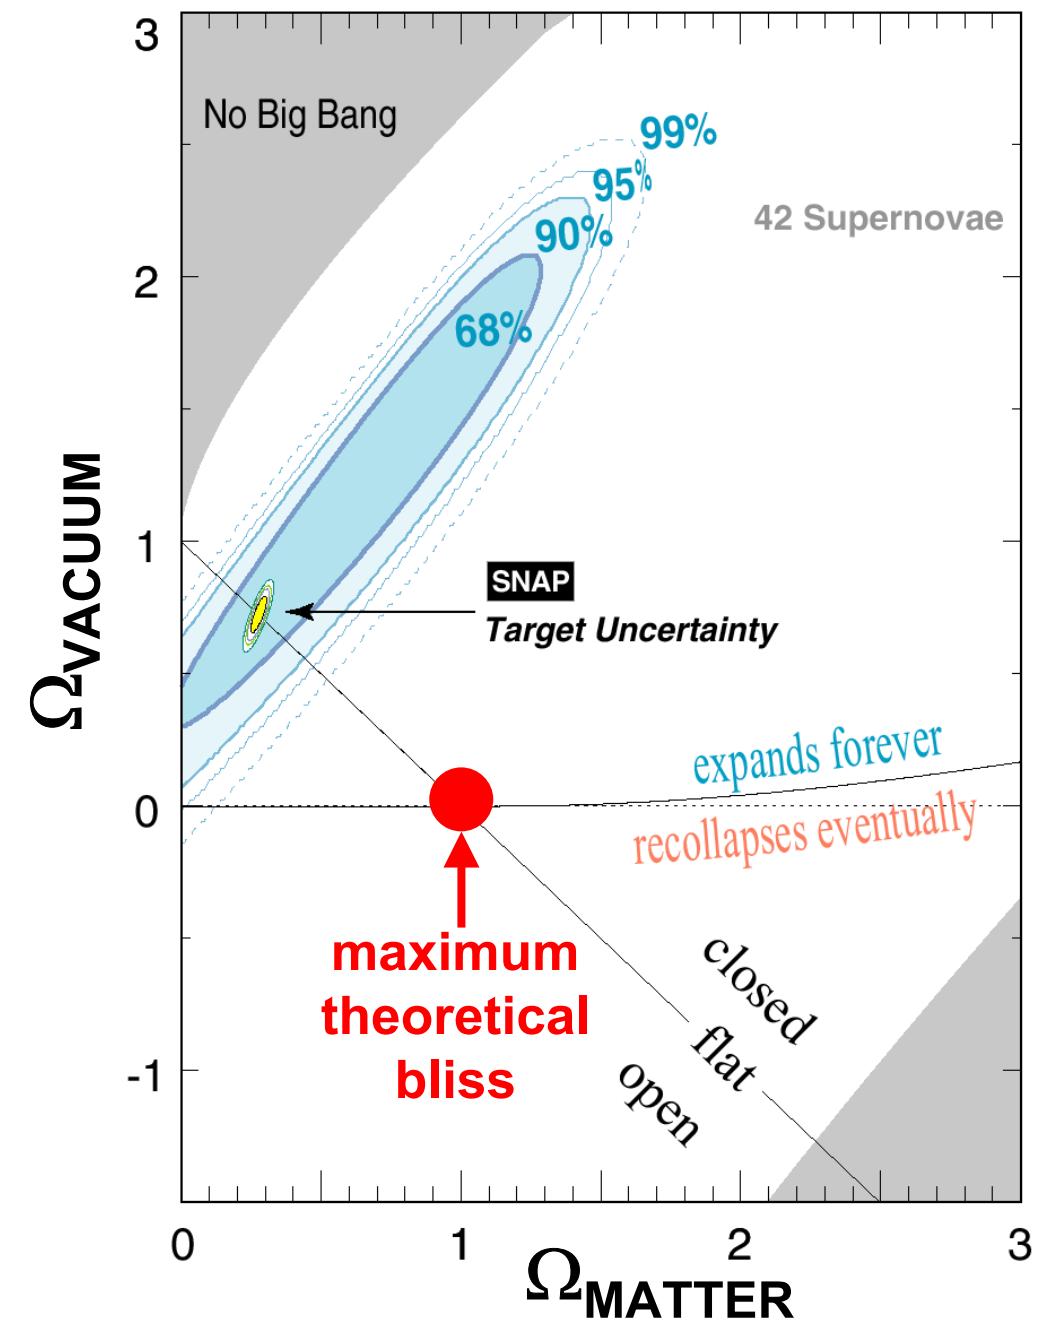

Acoustic peaks $\Omega_{TOTAL} = 1$

Dark energy $\Omega_\Lambda=0.7$

cosmological constant,
...some changing non-zero vacuum energy,
... or some unknown systematic effect(s)

Cosmo-illogical constant

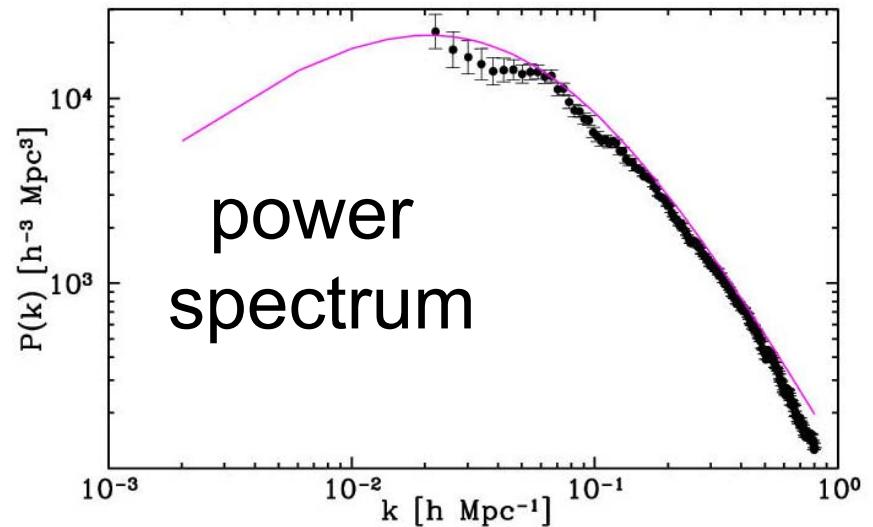

Mass density of space:

$$\rho \simeq 10^{-30} \text{ g cm}^{-3}$$

The unbearable lightness of nothing!

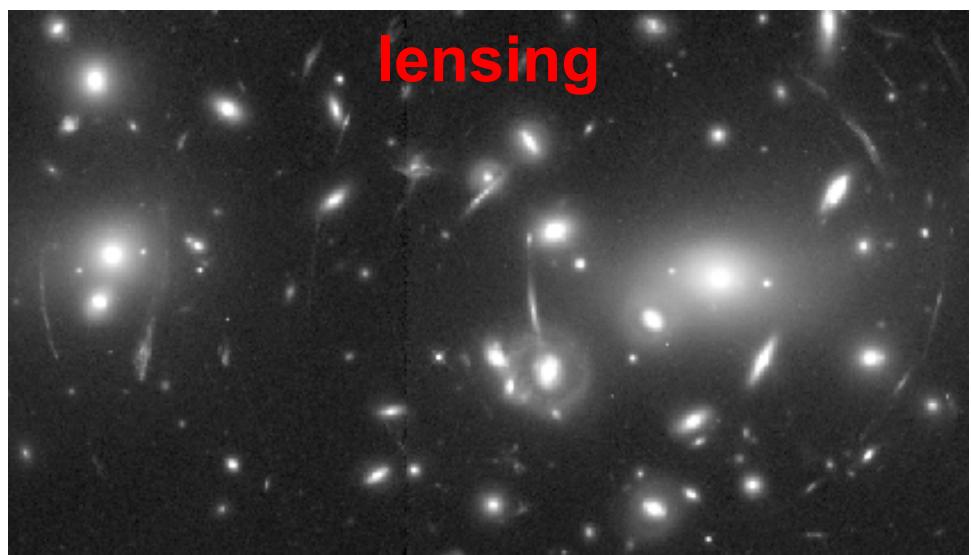

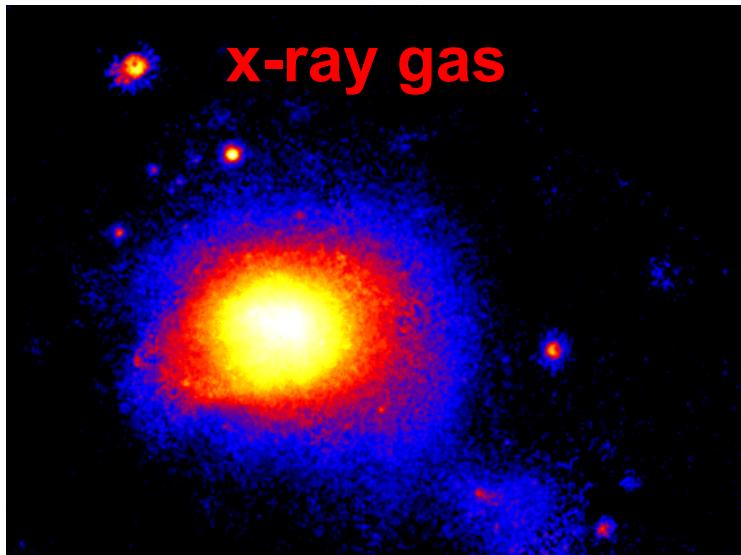

Dark Energy: aether of the 21st century

Matter $\Omega_M \sim 0.3$

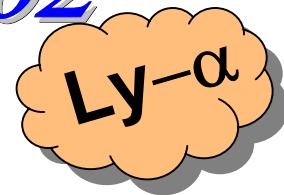

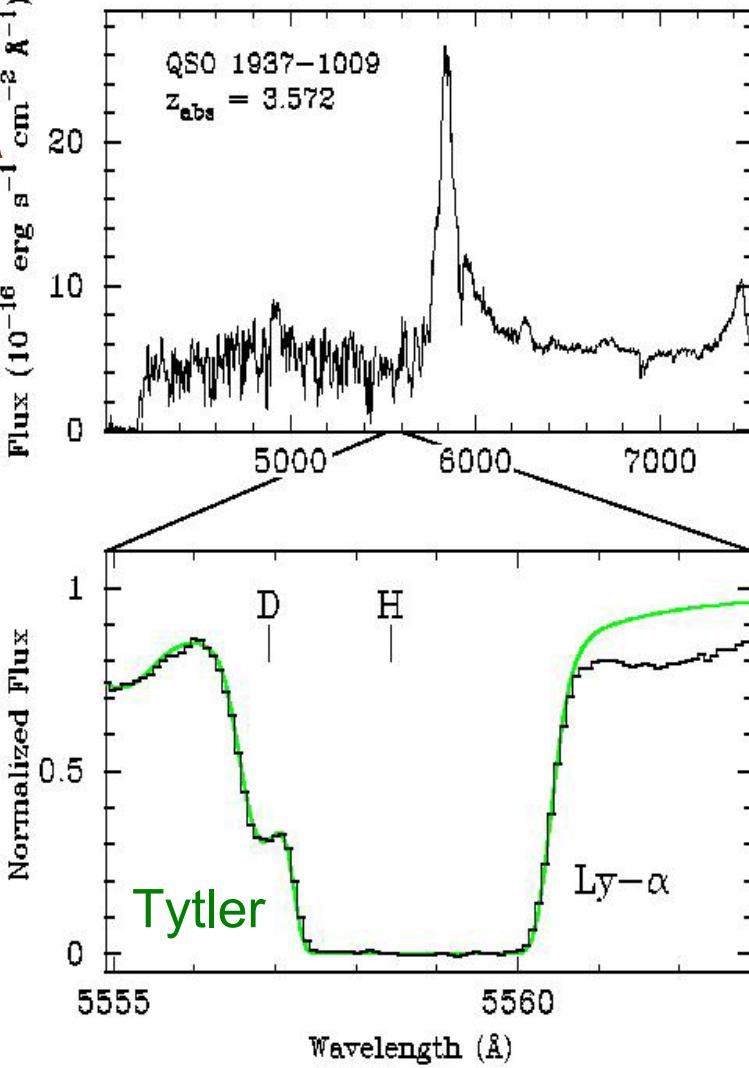

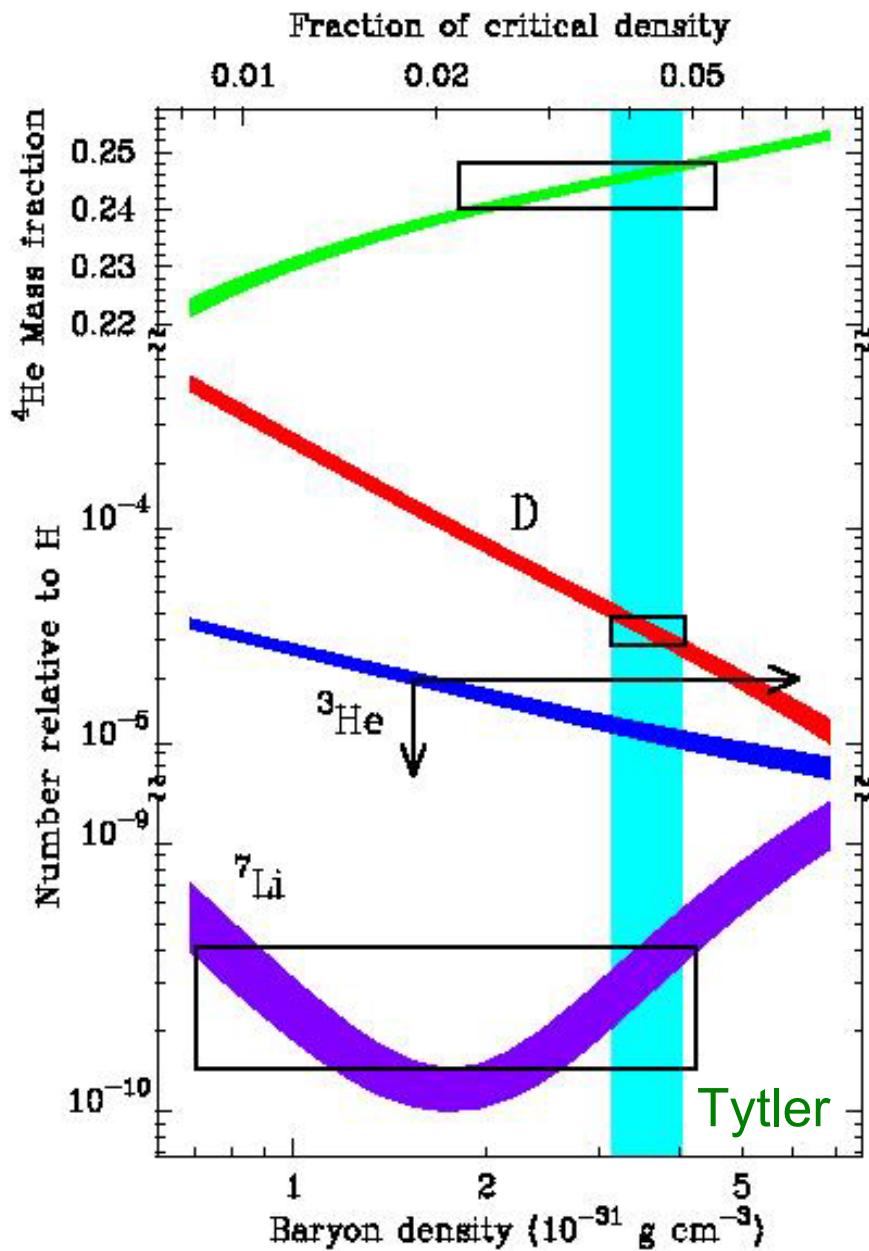

$$\Omega_0 = 1, \quad \Omega_M = 0.3$$

$$1 - 0.3 = 0.7$$

Baryons $\Omega_B h^2 \sim 0.02$

QSO 1937-1009

The cosmic food chain ($\Omega_{TOTAL} = 1$)

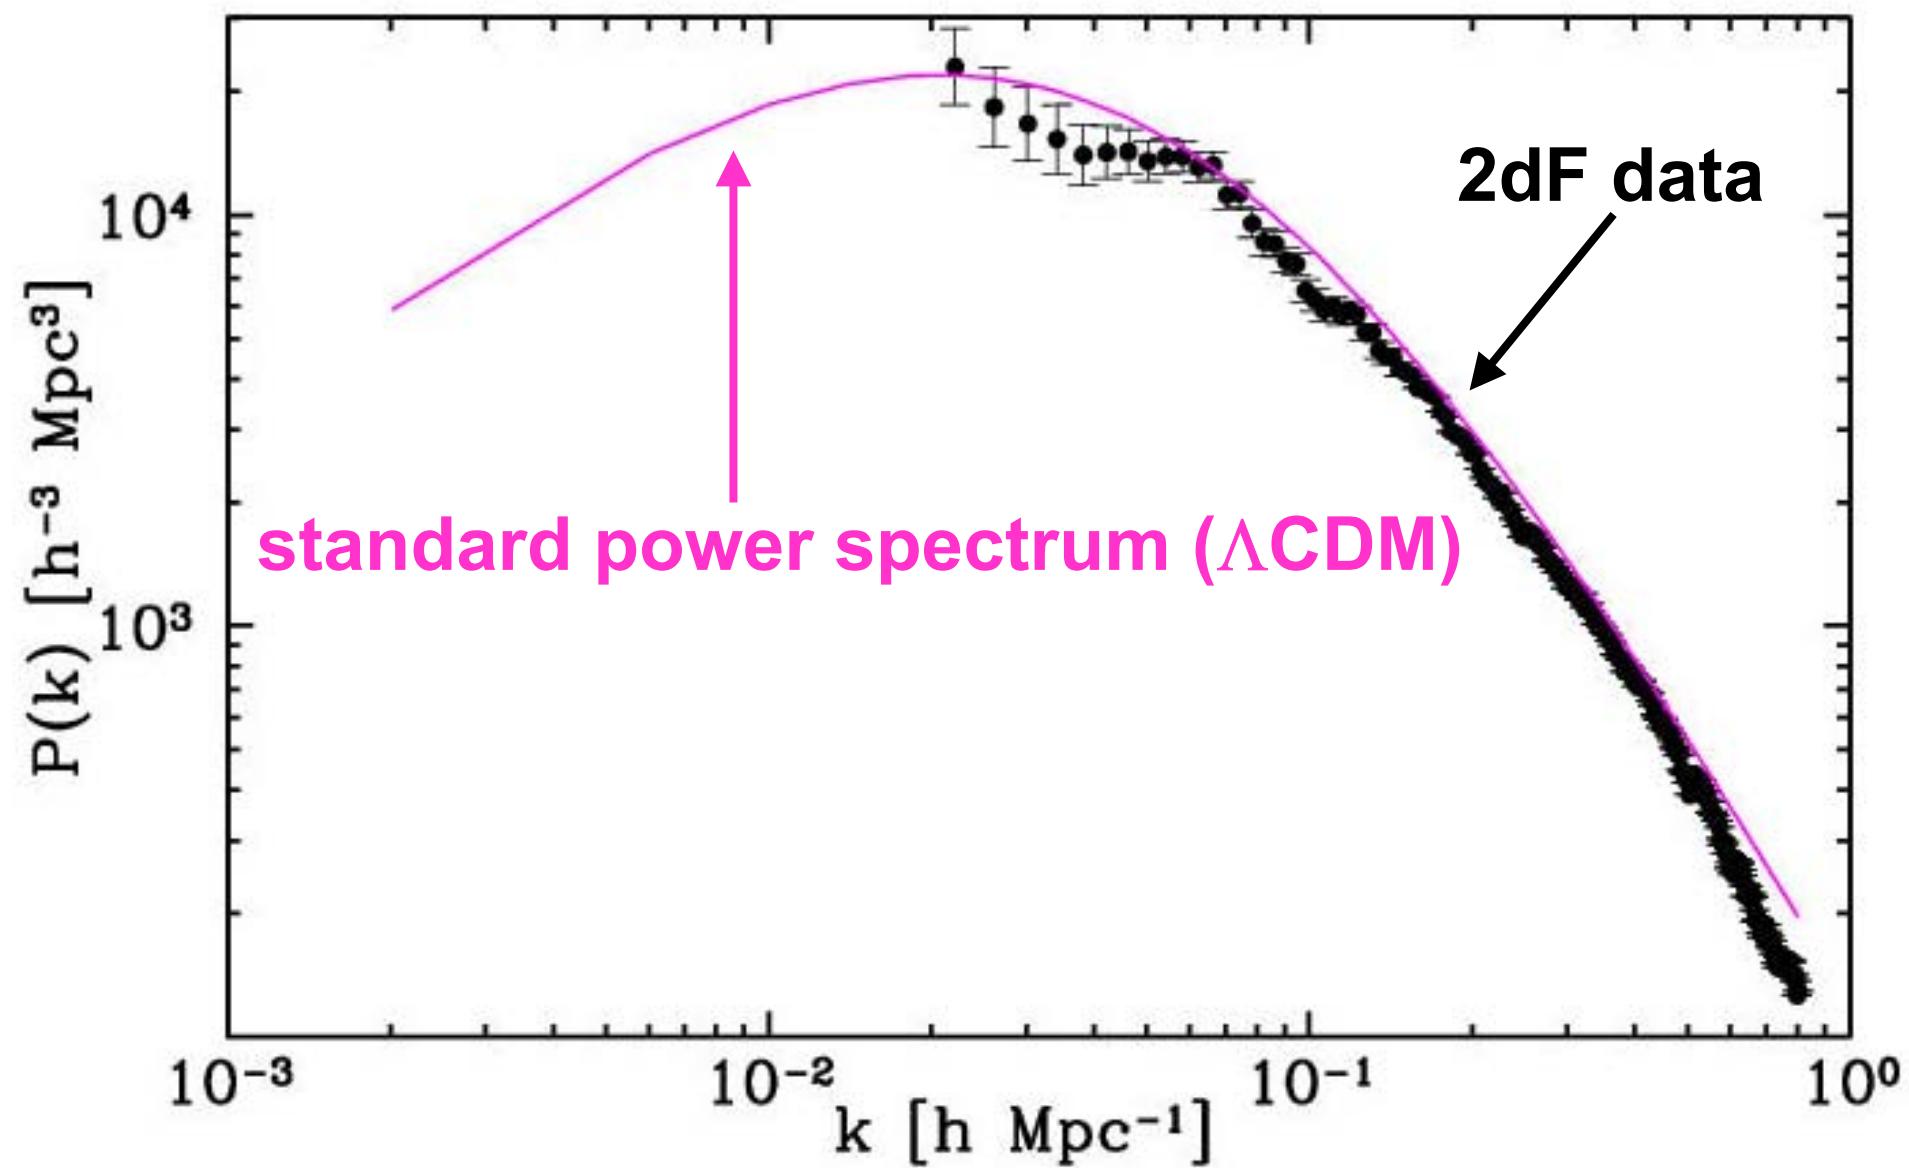

Dark energy:	66%
Dark matter:	30%
Dark neutrons & protons:	3.78%
Visible matter:	0.1%
Massive neutrinos:	0.1%
Radiation:	0.02%

Intelligent design?

Baryons small fraction – visible baryons even less

- Baryons cannot be dominant form of matter!
- (Neither can neutrinos!)

The evolved spectrum

The evolved spectrum

1. Collisionless damping – free streaming

If dark matter is relativistic or semi-relativistic particles can stream out of overdense regions and smooth out inhomogeneities. The faster the particle the longer its free-streaming length.

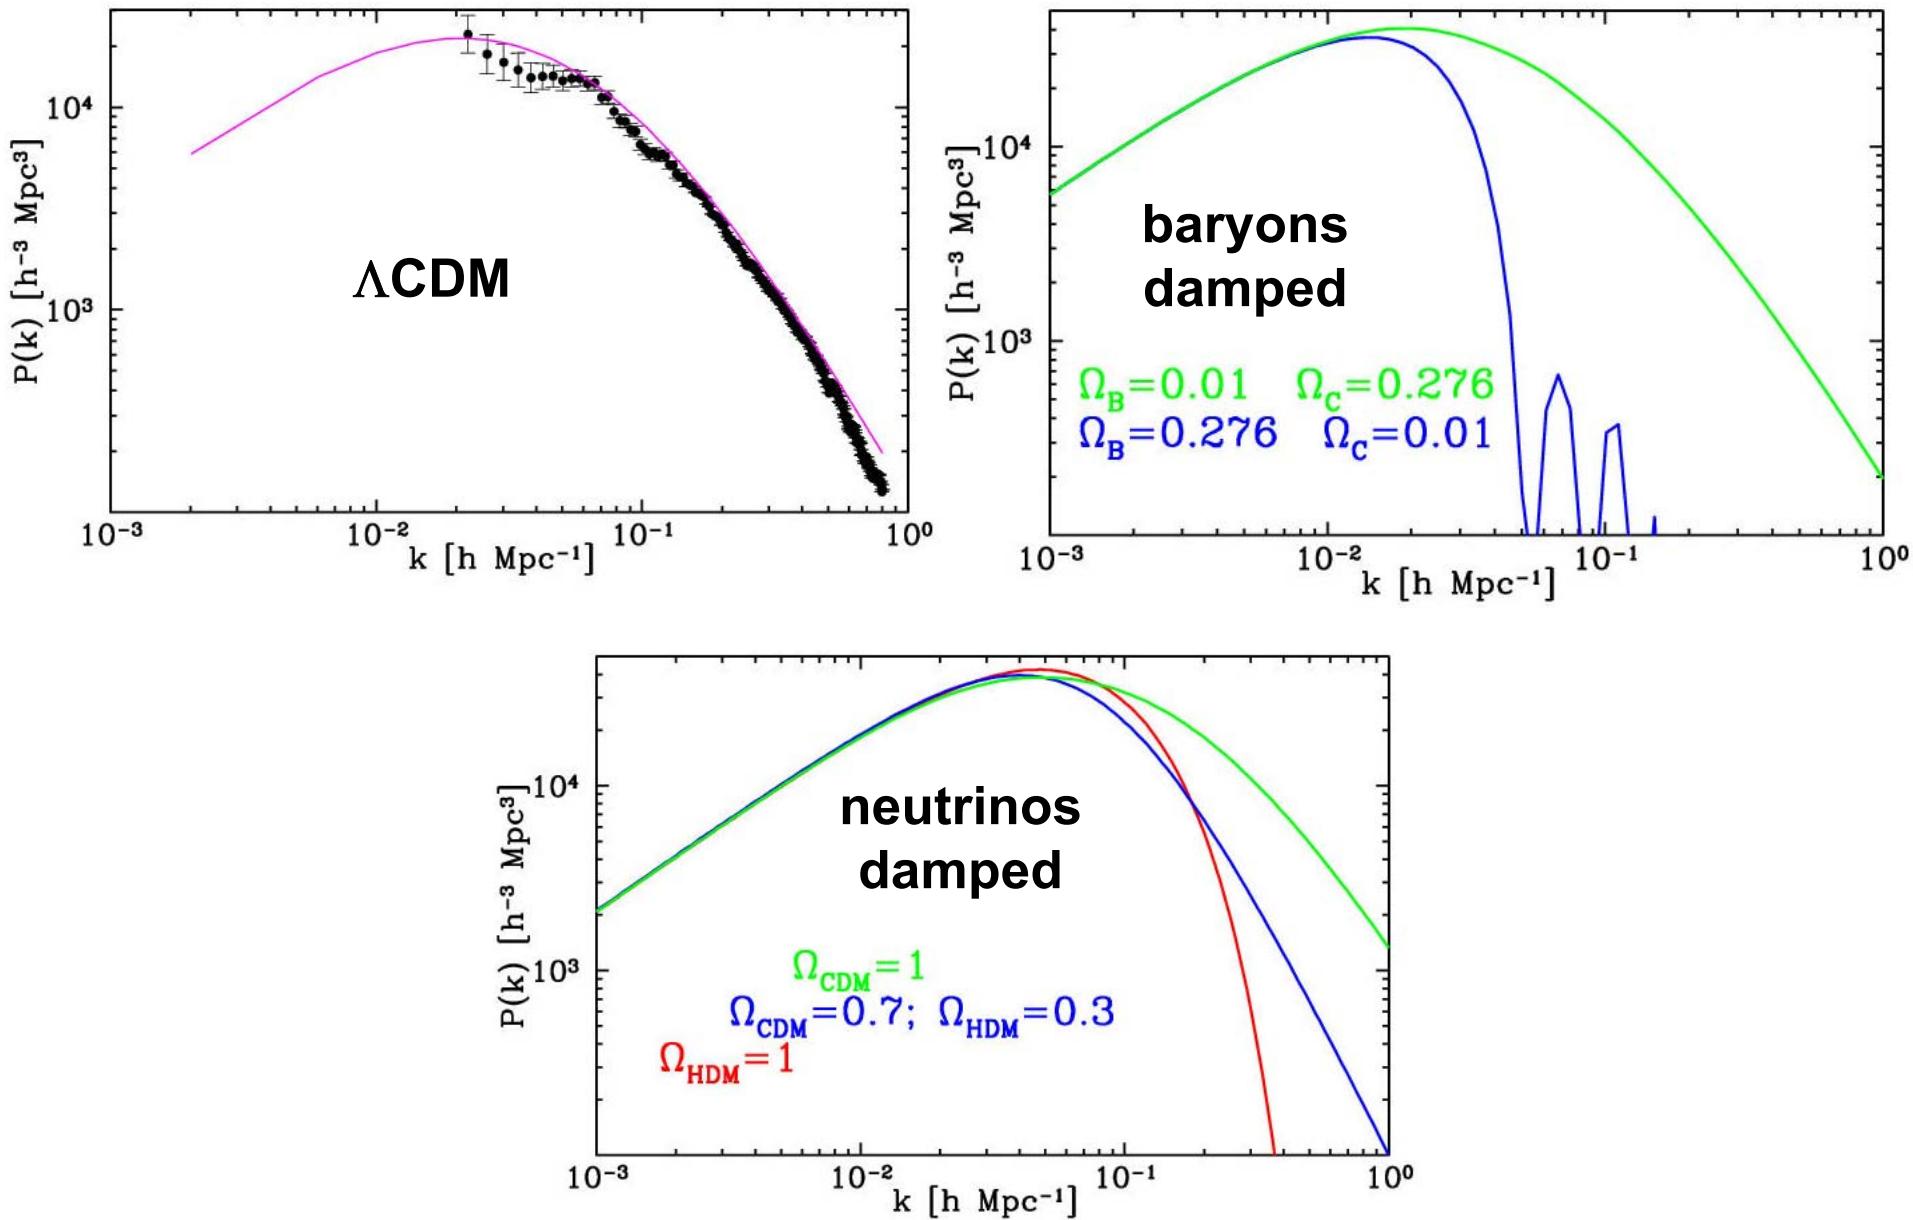

Quintessential example: eV-range neutrinos

2. Collisional damping – Silk damping

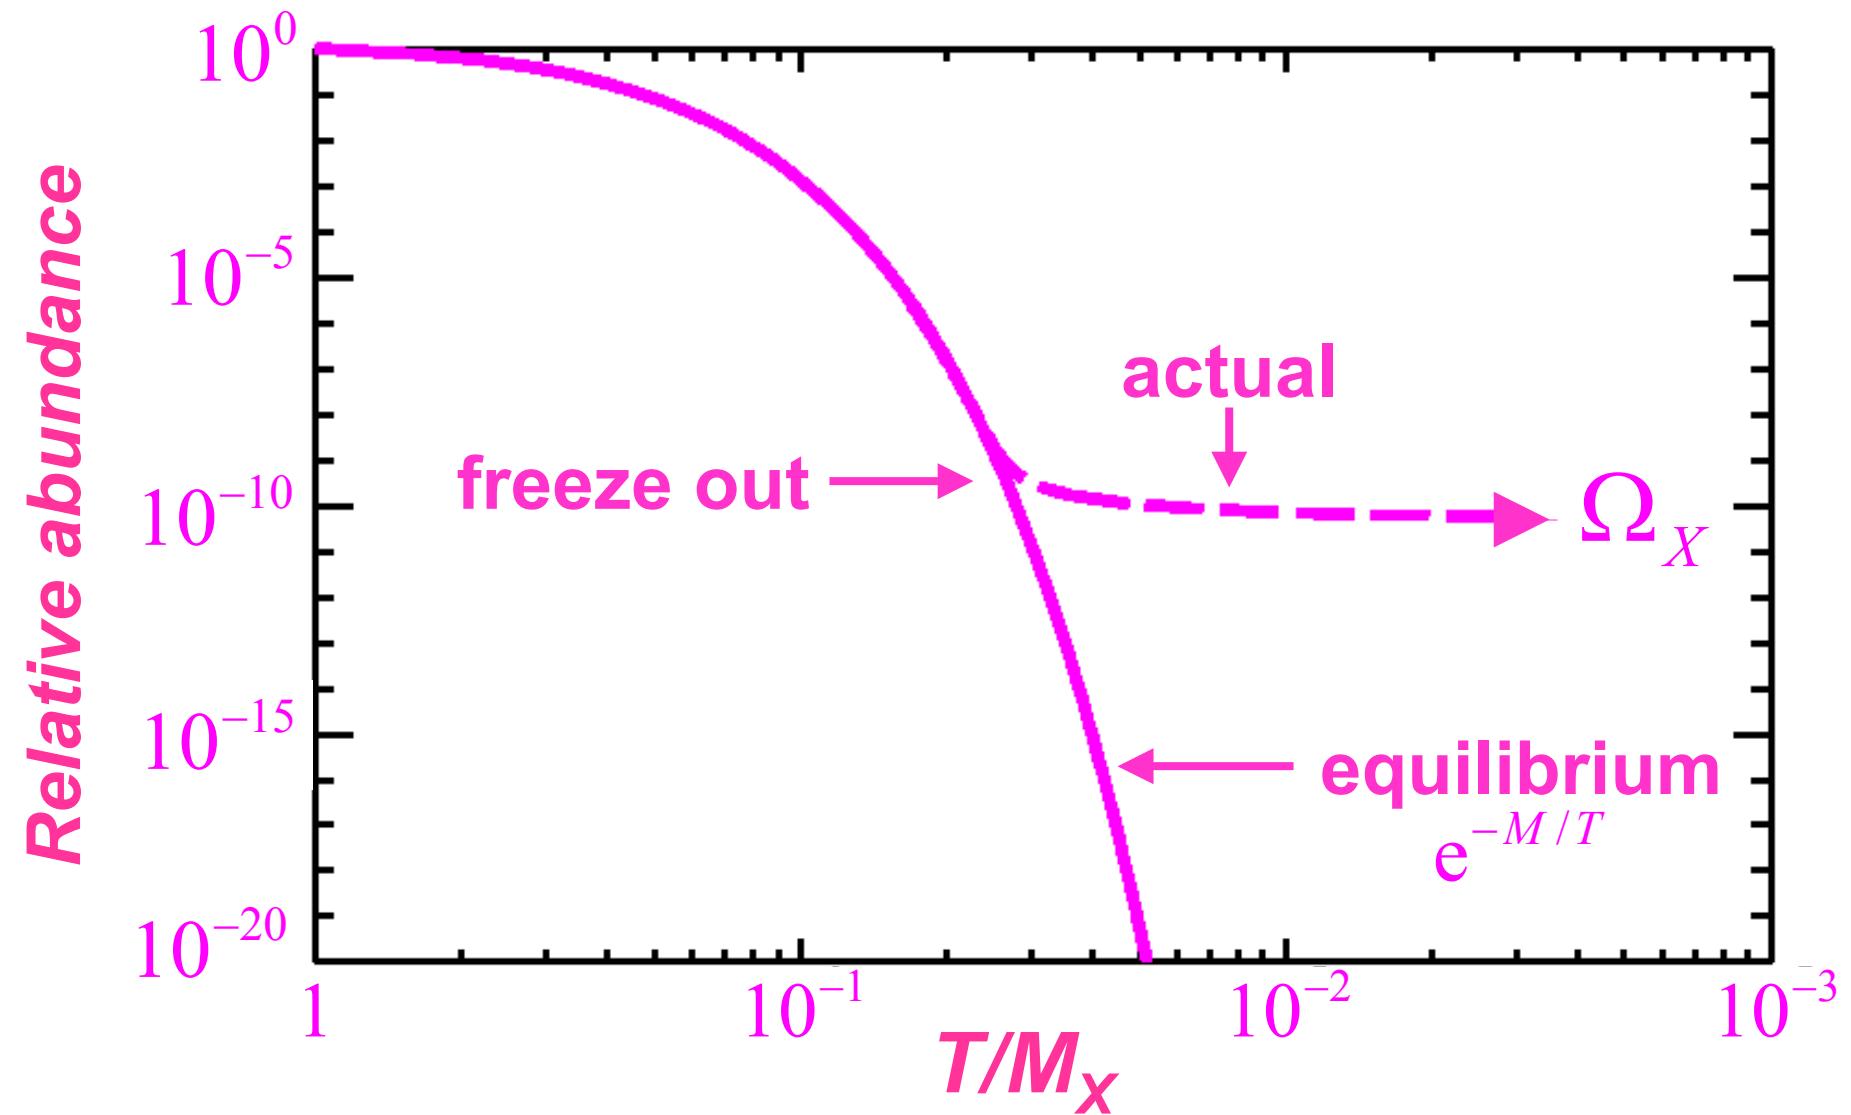

As baryons decouple from photons, the photon mean-free path becomes large. As photons escape from dense regions, they can drag baryons along, erasing baryon perturbations on small scales.

Baryon-photon fluid suffers damped oscillations.

The evolved spectrum

Asymmetry needed

$$\Omega_X \propto \sigma_A^{-1} \quad (\text{independent of mass})$$

Baryon Symmetric (BS) models?

Baryon Symmetric (BS) models?

Require:

1. CP domains
2. Small amount of inflation after phase transition
3. Domains today separated by about
 1 Gpc (Cohen *et al.*) 10 Mpc (Brown *et al.*)
 [horizon $2H^{-1} = 6h^{-1}$ Gpc = 10 Gpc ($h=0.6$)]
4. No domain walls

Models should be simple, insofar as possible!

“Despite temptations, I have remained chaste, insofar as possible!”
- Robert d' Arbrissel, Fontevrault Abbey, 1100

Experimental issue:

1. Annihilation radiation (background?)
2. Antinuclei in cosmic rays (do they get in our galaxy?)

Baryogenesis scenarios (BS)

Sakharov's Ingredients:

1. Baryon number violation
2. C & CP violation
3. Non-equilibrium conditions

How they are combined is important!

Dinner at a ★★★:

1. Beef
2. Sauce
3. Potato

Dinner at McDonald's:

1. Beef
2. Sauce
3. Potato

Baryogenesis requires physics beyond the Standard Model*

- Standard Model EWK baryogenesis fails (M_H too large)
- Supersymmetric Standard Model problematic
- Sphalerons still operative, so need nonzero $B-L$

“Beyond the Standard Model”

does not mean

“Beyond Reason”

*Non-SM signals from baryon asymmetry, dark matter, astronomical neutrinos.

Baryogenesis scenarios (BS)

SU(5) Drift and decay*

SM Electroweak baryogenesis*

SUSY GUT nonzero B–L

Leptogenesis (decay of N)

Affleck—Dine

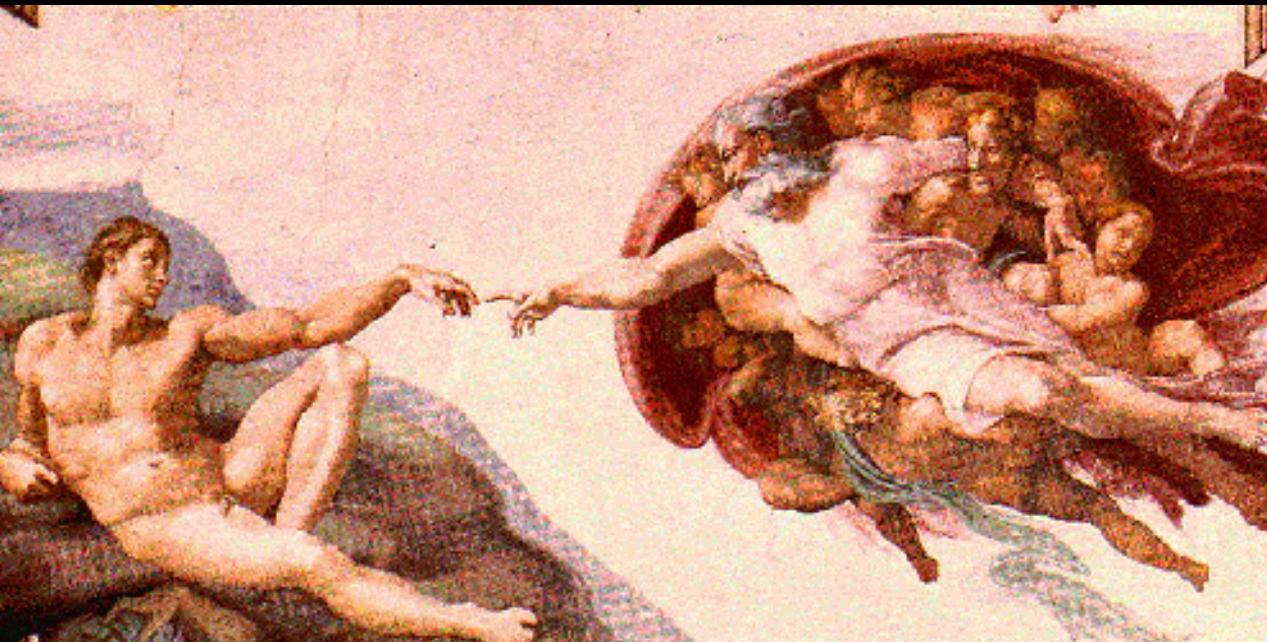

Spontaneous baryogenesis

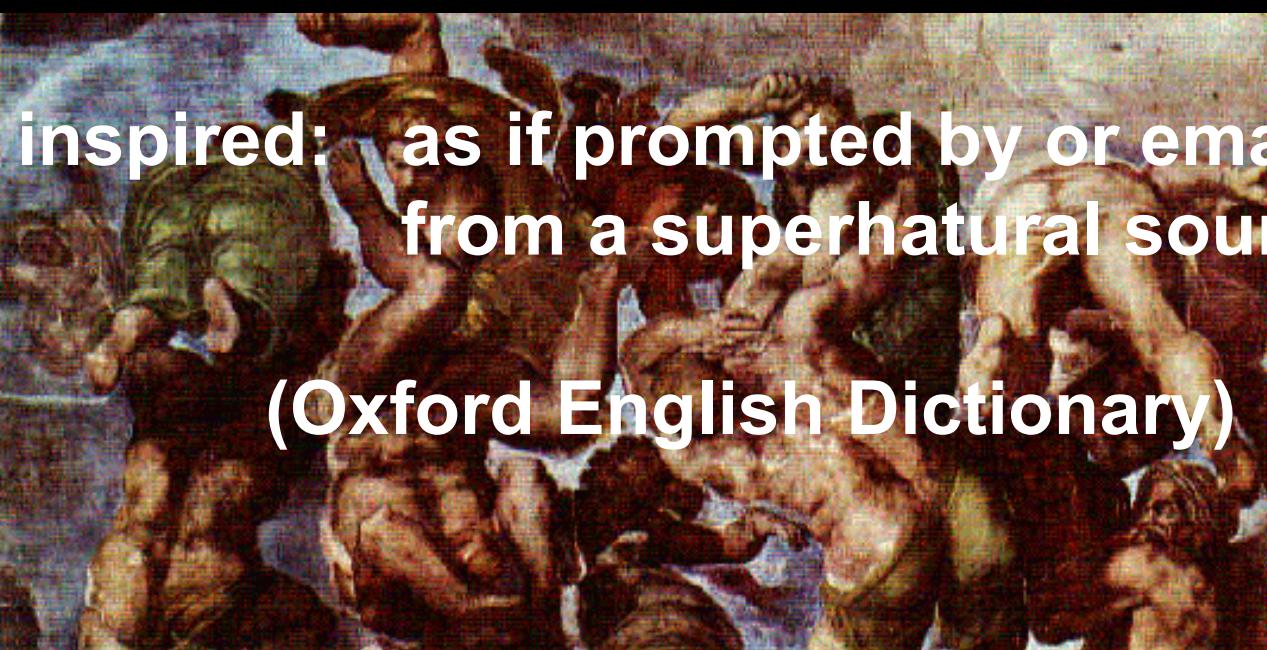

Brane scenarios

*See talk, “Six reasons I hate experimentalists.”

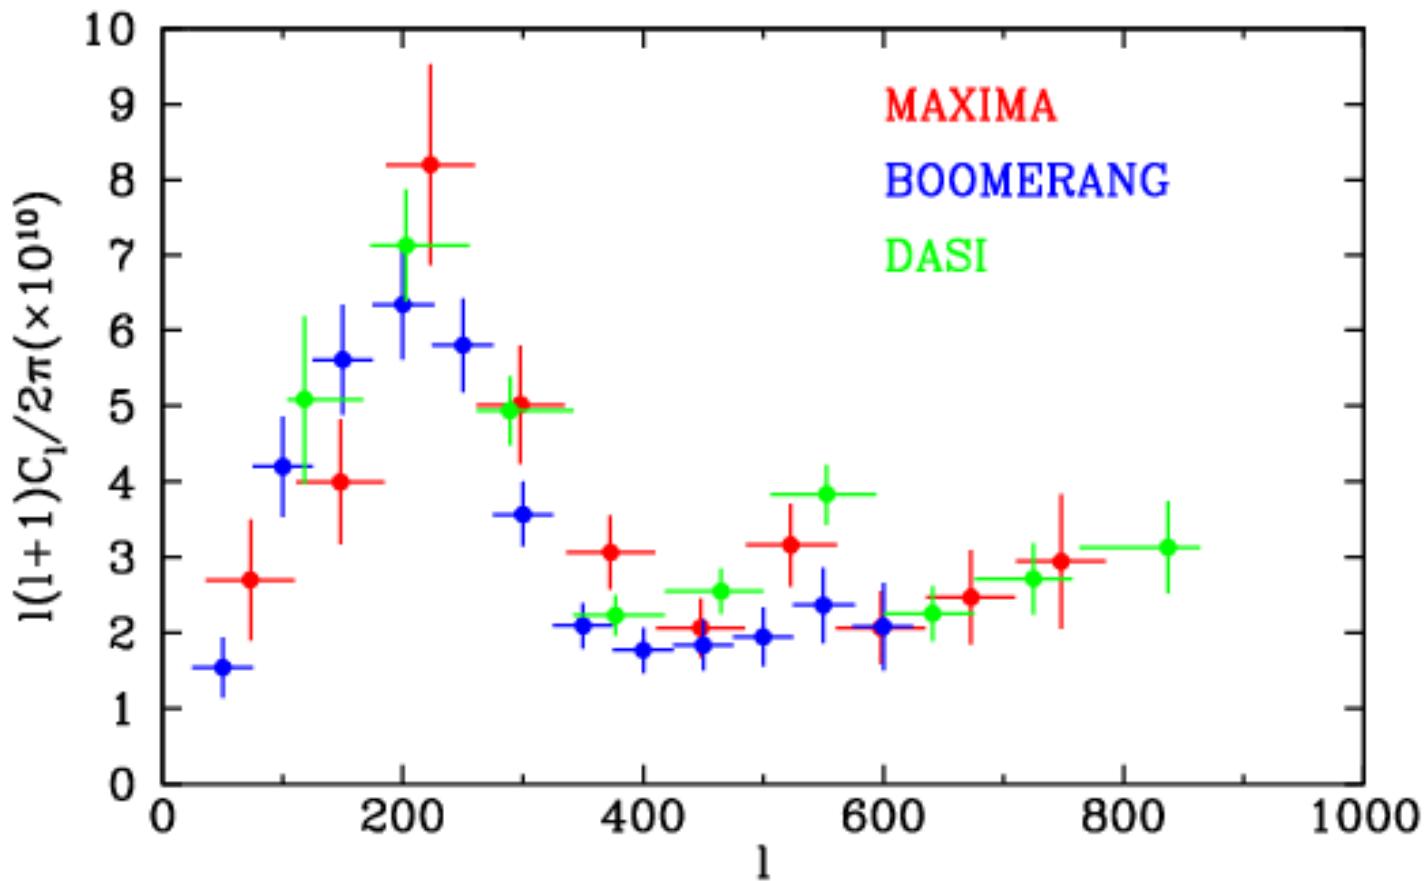

**Top down
(superstring
inspired)**

**inspired: as if prompted by or emanating
from a supernatural source. Bottom up
(Oxford English Dictionary)**

Baryogenesis scenarios (BS)

- The baryon asymmetry is just one number
- cf. the microwave background

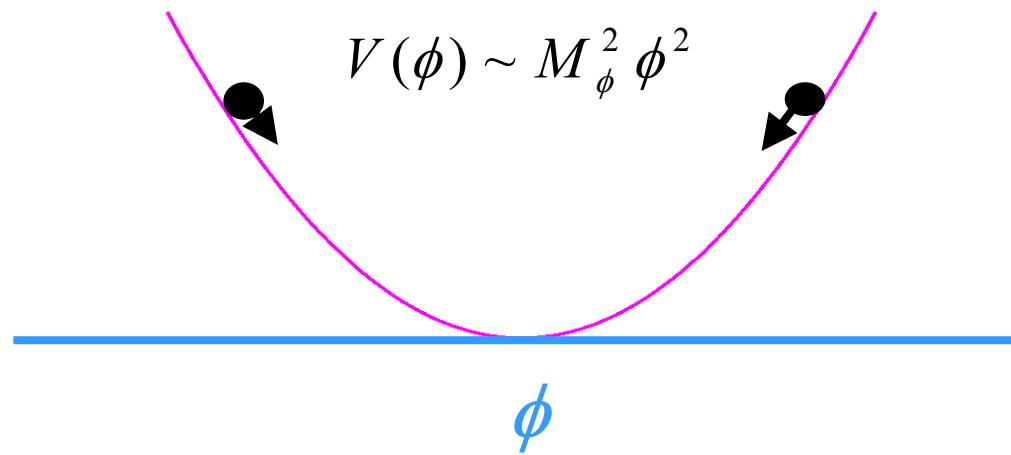

Baryogenesis after inflation

- Inflaton is light!
- Reheat temperature is low!
- Leptogenesis & SUSY GUT $\Delta(B-L)$ requires massive particles

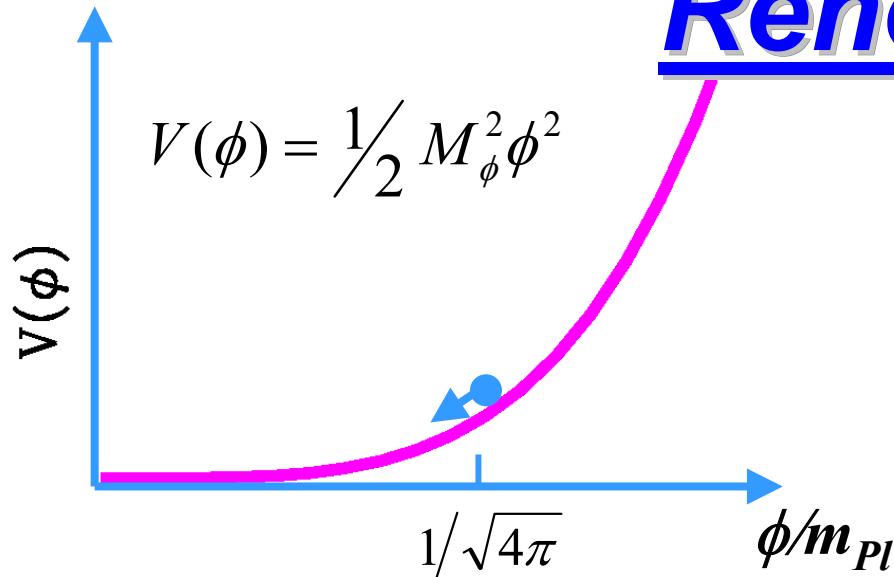

Defrosting

- generate ΔB after inflation
- after inflation the universe is frozen

- defrosting:
 - reheating (ca. early 80s)
incoherent, nonresonant, linear decay of inflaton
 - preheating (ca. mid 90s)
coherent, resonant, nonlinear particle production

Reheating

$$M_\phi = 10^{13} \text{ GeV}$$

$$\phi_{END} = m_{Pl} / \sqrt{4\pi}$$

- coherent ϕ oscillations with decreasing amplitude

$$\omega = M_\phi \quad \rho_\phi \propto a^{-3}$$

- ϕ coupled to other fields

ρ_ϕ decays with width Γ_ϕ

- decay produces massless degrees of freedom (γ)
thermalize to temperature T

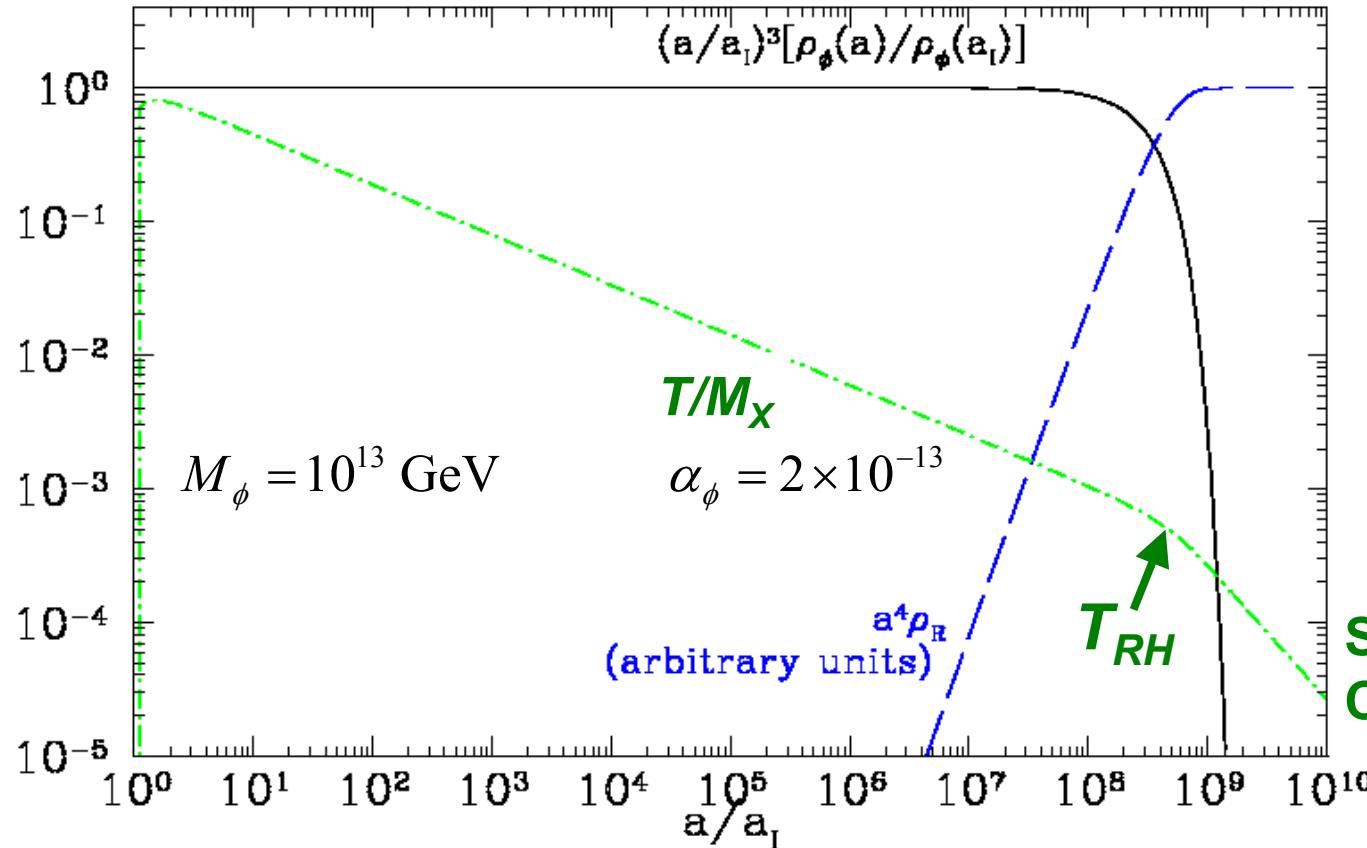

- when “all” energy extracted from ϕ , $T=T_{RH}$
gravitino limit $T_{RH} < 10^9 \text{ GeV}$

Reheating

$$\phi = \text{inflaton} \quad \Gamma_\phi = \alpha_\phi M_\phi$$

$$\dot{\rho}_\phi + 3H\rho_\phi + \Gamma_\phi\rho_\phi = 0$$

$$\dot{\rho}_R + 4H\rho_R - \Gamma_\phi\rho_\phi = 0$$

$$T_{MAX} \gg T_{RH}$$

Scherrer & Turner
Chung, Kolb, & Riotto

Preheating

- Inflaton ϕ coupled to another scalar field χ :

$$V = \frac{1}{2} g^2 \phi^2 \chi^2$$

- Field equation:

$$\ddot{\chi}_k + 3H\dot{\chi}_k + \left(\frac{\vec{k}^2}{a^2} + m_\chi^2 - \cancel{\varepsilon R} + g^2 \phi^2 \right) \chi_k = 0$$

\vec{k} = comoving momentum $\phi(t) = \Phi(t) \sin mt$

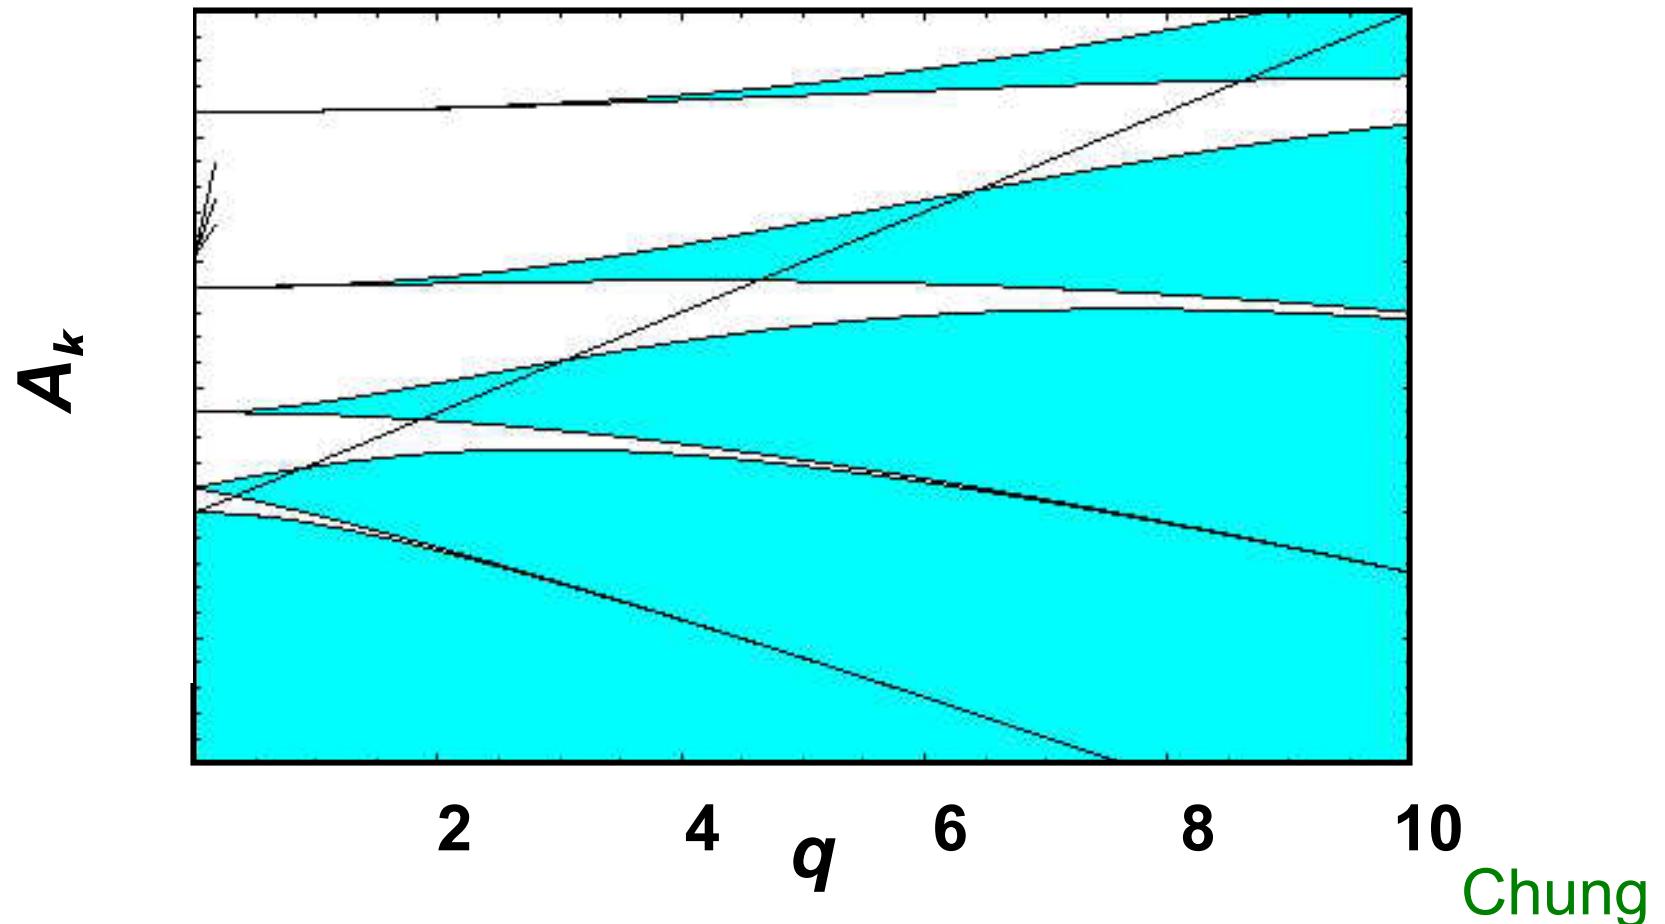

- Minkowski space Φ constant: Matheiu equation

$$\ddot{\chi}_k + 3H\dot{\chi}_k + \left(\frac{\vec{k}^2}{a^2} + g^2 \Phi^2 \sin^2 mt \right) \chi_k = 0$$

Instability regions of Mattheiu Equation

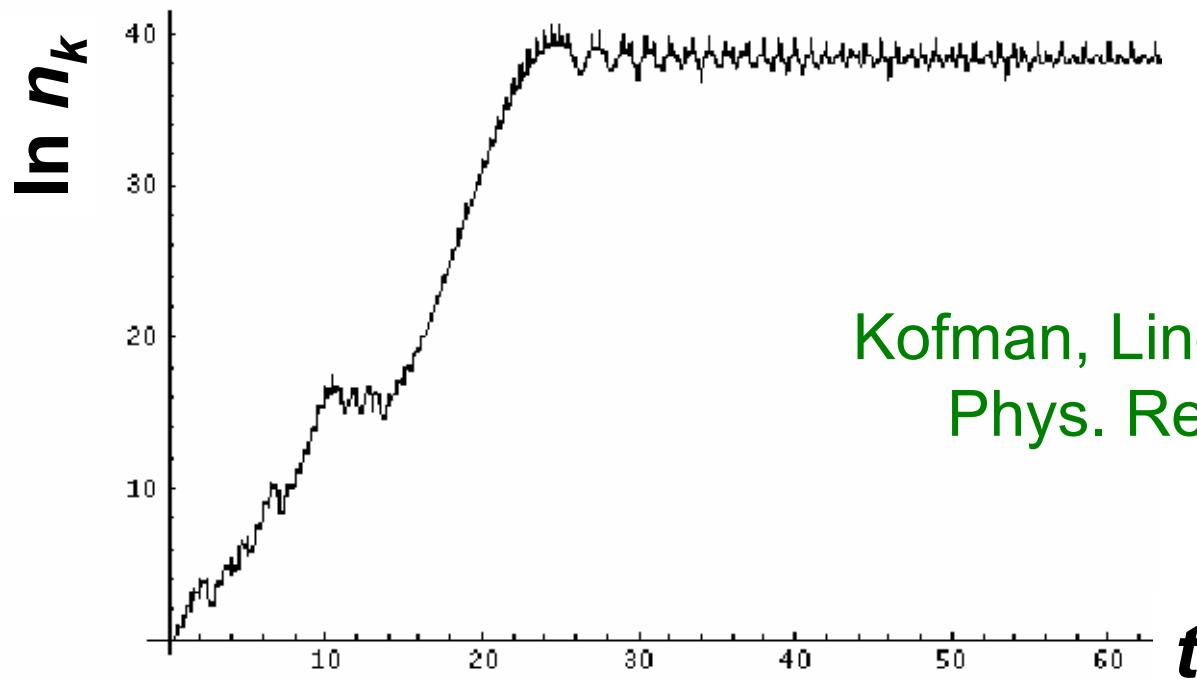

$$q = \frac{g^2 \Phi^2}{4m^2} \approx 10^{12} g^2$$

$$A_k = 2q + \frac{k^2}{m^2}$$

Chung

Preheating

**Conclusion: in a few dozen oscillation periods,
significant fraction of energy extracted**

**Note: inherently coherent process-
many inflaton quanta participate**

Preheating

- Rethink symmetry restoration
(Khlebnikov, Kofman, Linde, Tkachev)
- Produce massive particles after inflation
(Kolb, Riotto, Tkachev)
- Naturally produce nonequilibrium conditions, massive particles for baryogenesis (assume CP violation)
(Kolb, Linde, Riotto)

Cosmological parameters

- **Cosmological parameters:**

H_0 → Hubble's constant

q_0 → deceleration parameter

Ω_i → the cosmic food chain

$(\Omega_{\text{TOTAL}}, \Omega_M, \Omega_B, \Omega_\Lambda, \Omega_\gamma, \Omega_\nu, \dots)$

t_0 → age of the universe

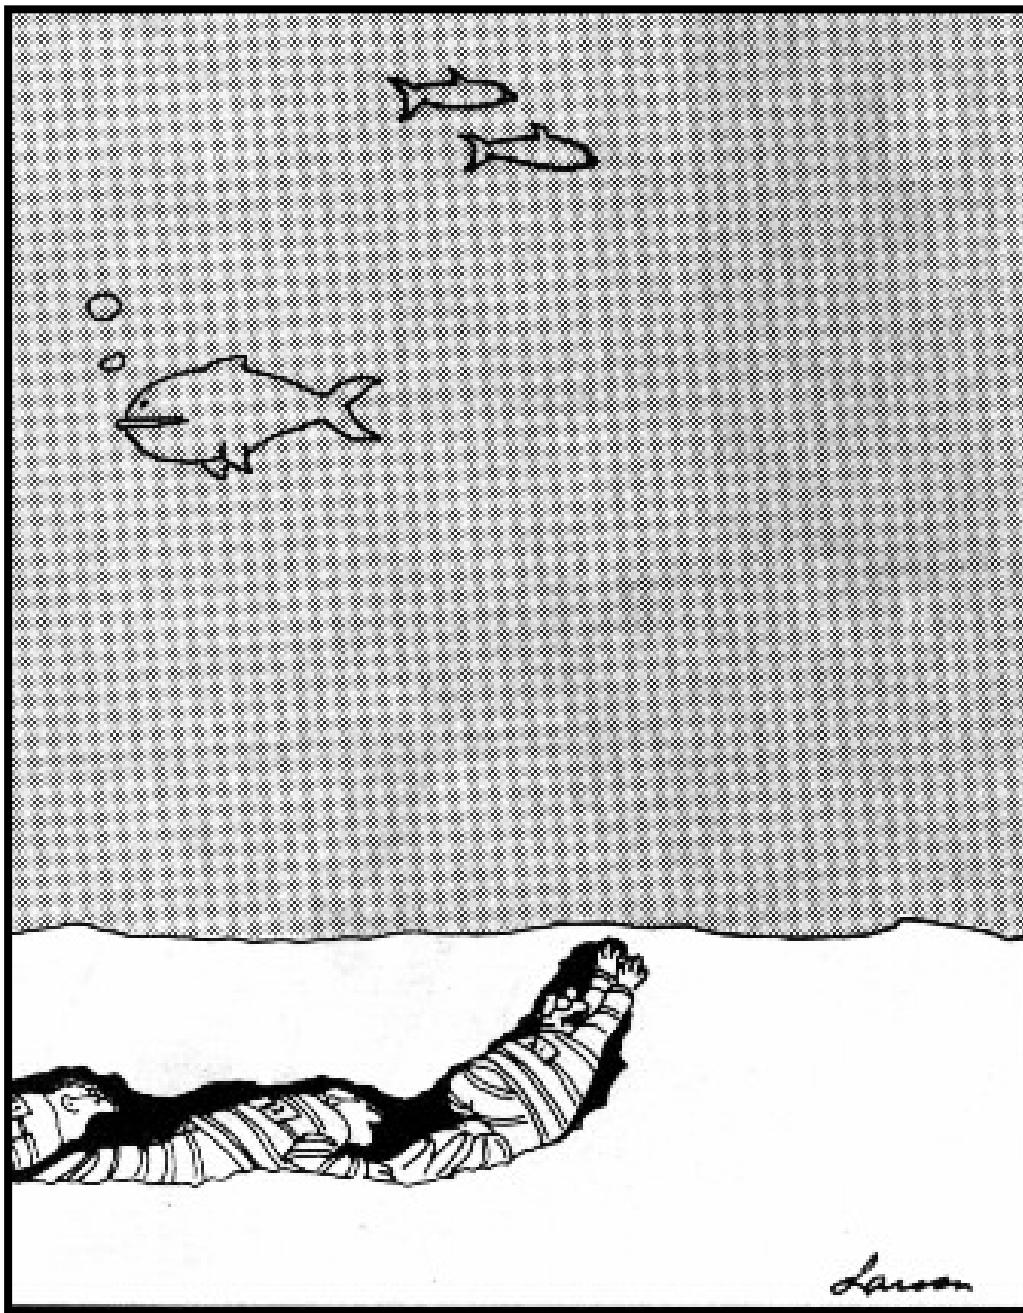

T_0 → temperature of the universe

- **Power spectrum of large-scale structure:**

$P(k)$

- **Anisotropy of CMB:**

C_l

We're almost free, I just felt the first drops of rain

What We “Know” *

The matter density is dominated by cold dark matter,
which we know nothing about!

The baryon asymmetry arises in the GUT or EWK era through
B, CP, and equilibrium violation (Sakharov’s ingredients),
EWK doesn’t seem to work....GUT scenarios are not simple!

The perturbations arise from inflationary dynamics,
which depends on particle physics at high energies,
which we know nothing about!

The universe is dominated by a cosmological term
(dark energy, funny energy, quintessence, polenta,
cosmological constant, cosmoillogical constant,),
which we know less than nothing about!

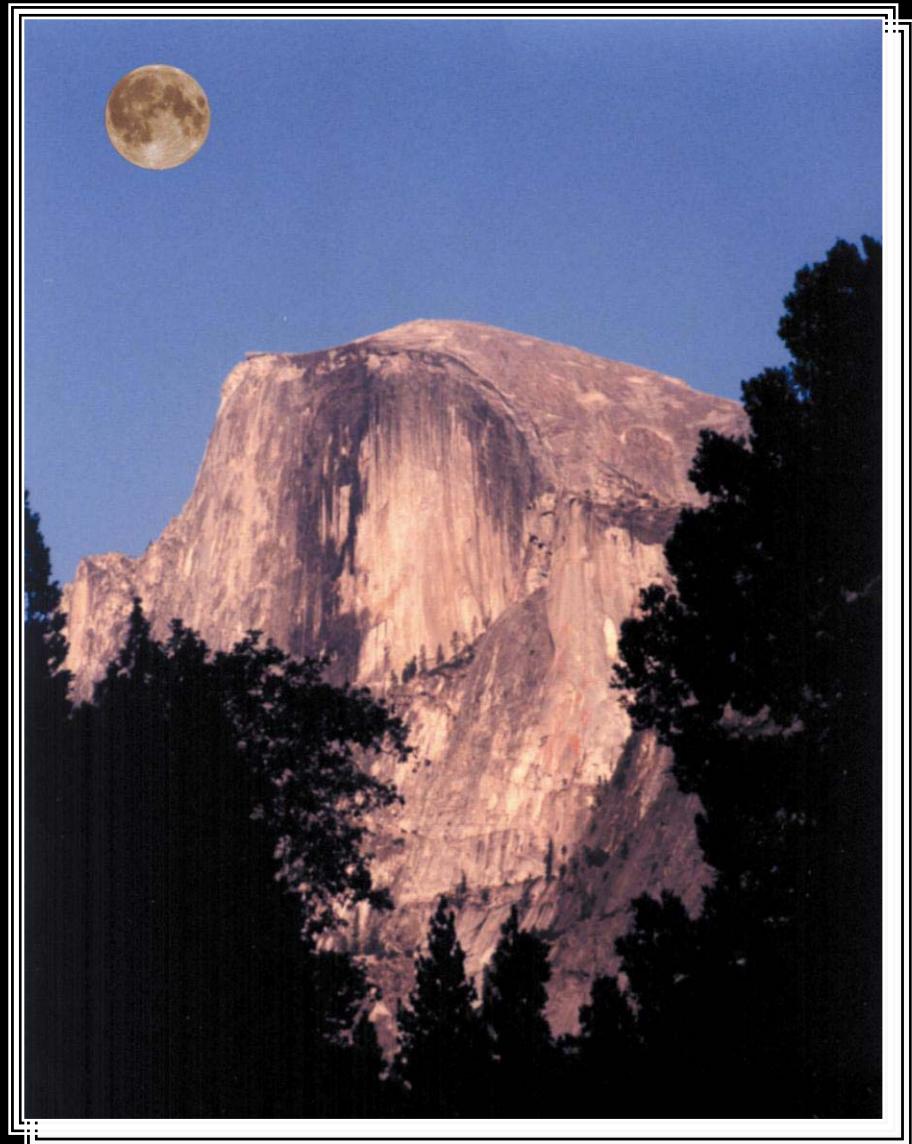

*It ain’t what you don’t know, it’s what you know that ain’t so!

Origin of baryon asymmetry: a complex natural phenomenon

**Sakharov's prescription:
a simple, elegant, compelling
explanation**

**“For every complex natural phenomenon
there is a simple, elegant, compelling,
wrong explanation.”**

- Tommy Gold

When one tugs at a single thing in nature, he finds it hitched to the rest of the universe.

– John Muir
